Asunción, Paraguay

March to September 2026

Executive Summary

Agrofuel S.R.L. is a Paraguayan startup dedicated to producing high-grade biofertilizers by upcycling agro-industrial waste into nutrient-rich organic soil enhancers. Our flagship product—a 10 kg bag retailed at Gs. 45,000—directly solves the severe soil degradation, environmental acidity, and unsustainable input costs caused by traditional chemical fertilizers. By delivering a microbially active, nutrient-dense formulation, Agrofuel restores soil structure, enhances water retention, and lowers expenses for sustainable crop management.

Our growth roadmap begins in Year 1 with securing SENAVE regulatory certifications, establishing our operational headquarters at Av. Manuel Ortiz Guerrero c/ Avelino Martínez in San Lorenzo, and driving initial market entry across Central Department agro-stores and direct farm sales. By Year 3, we plan to consolidate B2B distribution networks with regional agricultural cooperatives and expand manufacturing volume for medium-scale producers, ultimately establishing Agrofuel as a recognized national organic brand with a diversified bio-input portfolio by Year 5.

Our primary target market comprises Paraguayan smallholder farmers facing rising chemical costs and depleted soils, who require an affordable, high-yield solution through accessible local channels. While competing against established chemical brands and traditional organic suppliers such as Granja Natural S.A. and OrganiTec Fertilizantes S.A., Agrofuel's Unique Selling Proposition (USP) lies in its zero-waste formulation. By upcycling abundant regional waste—sugarcane ash for potassium, yerba mate dust for carbonized organic matter, and cattle manure for biological transformation—we deliver superior microbial performance at a highly competitive price point.

Agrofuel S.R.L. is led by an ambitious management team with a distinct strategic edge: key raw materials are sourced virtually free through family farm connections, drastically reducing production overhead. We complement this advantage with expert external advisors in agronomy and SENAVE regulatory compliance. To execute this vision, Agrofuel requires an initial capital investment of Gs. 85,000,000 to fund processing machinery, facility lease (Gs. 1,500,000/month), and essential working capital. Combined with social security-compliant salaries (Gs. 4,000,000 to Gs. 6,000,000) and a balanced 60% cash / 40% 30-day credit supplier payment structure, this financial model preserves liquidity

and projects operational break even within the first year alongside sustainable long-term profitability.

Company Description Worksheet

Business Name	AgroFuel
Company Mission Statement	Design and deliver an innovative agro-engineering solution to increase soil productivity by creating an organic biofertilizer from local agro-industrial residues that remain financially accessible for local agricultural producers.
Company Philosophy/ Values	We are a company who values waste, believing that there is no such thing as trash and all things are usable, scientific integrity, and responsibility on what we are trying to improve and innovate. Our philosophy not only depends on the foreign products that are created on other continents, we believe that the future of agriculture is located in our own lands, in the air we breathe and, in the materials, we do not take into account.
Company Vision	Become the top innovative and important Paraguayan microenterprise who creates organic fertilizer that can change market and becoming the standard for nutrition at Paraguay.
Goals & Milestones	Short-term: -Finish a stable recipe that works using the local waste, proving that our cost for our raw material is lower than the wholesale price, and demonstrate that our chemical construction can match the ordinary one of N-P-K. Long-term: - Establish a small building near a major industrial zone to increase productivity, capture 1% of the small local fertilizer market to reduce the dependency on imported products, and develop a tool that informs farmers how much of our fertilizer they need for their specific production. Our corporate social responsibility goal is to donate 1% or yearly profit to non-profit organizations that care about the environment, such as A Todo Pulmon Paraguay Respira.
Target Market	Small-to-medium produce growers, nursery managers, and eco-conscious agricultural co-op members in Asunción and surrounding agricultural zones who face depleted soil structure and inflated chemical fertilizer prices.
Industry/ Competitors	Biofertilizers & Organomineral Soil Conditioners. Key competitors include imported synthetic NPK distributors (Yara, Mosaic), commercial chemical suppliers, and raw uncomposted manure traders

Legal Structure/ Ownership	Sociedad de Responsabilidad Limitada-S.R.L- con un capital social de 85.000.000 Gs. en cuotas iguales entre los cinco socios, en donde cada uno le corresponde 100 cuotas de 170.000 Gs.

Products & Services Description

Product/ Service Idea	Agrofuel is an organo-mineral biofertilizer made by turning local industrial waste into a high-quality soil builder. Leaving this waste untreated causes land pollution, toxic runoff, and greenhouse gas emissions. We mix these industrial by-products with cow manure, chicken manure with rice hulls, Elephant grass, wood dust, topsoil, and Californian red worms. We sell directly to farms, cooperatives, and nurseries as well as home gardeners.
Special Benefits	Our product gives our customers the guaranty that their plants will grow and develop faster than usual. This product guaranties to help the planet go greener and we are compromised to make our customers happy and greener. Our customers choose our products before the competition because they trust us and know the value of our product
Unique Features	Agrofuel differentiates from others, because of a specialized organic formula that combines upcycled sugarcane ash and yerba mate dust with Eisenia fetida vermicompost, delivering a balanced nutrient profile that basic composts can't match. Its physical structure with elephant grass fiber and wood dust boosts soil moisture retention by up to 30% and prevents nutrient leaching.
Limits and Liabilities	First, mass production cannot be expanded quickly because a strict 7-week manufacturing cycle is required. Second, extreme heat or dry conditions pose a severe biological risk to the survival of the Californian red worm population. Third, safety liabilities regarding animal pathogens or weed seeds in raw manure require strict pre-composting to ensure full product safety. Finally, customer objections regarding potential bad smells or the slow-release nature of organic nutrients are solved through proper curing and clear user instructions.
Production and Delivery	Agrofuel operates on a production cycle using raw input from designated regional suppliers: sugarcane ash and yerba mate dust from local processing plants, manure from regional farms, wood dust and grass from local sawmills and growers, and Eisenia fetida stock from vermiculture suppliers. Production consists of initial pre-composting to sanitize inputs, followed by vermicomposting digestion, and final sieving and packaging into 20 kg bags. Distribution combines direct-to-farm deliveries for cooperatives with retail sales through local agricultural supply stores and nurseries.
Suppliers	

	We will get all the materials from RAMSAR enterprise they supply us all our materials, the ingredients we get there also the tools everything we get from RAMSAR, the packaging
Intellectual Property Special Permits	The brand name and logo must be protected with a trademark. Because the product is a biofertilizer made from animal and farm waste, special permits and safety tests are required by law. The product must be registered with SENAVE under Ley N° 3.481/08 in Paraguay to get an official sales permit. Lab tests are also needed to check pH levels, nutrients, and make sure there are no dangerous bacteria or heavy metals. Finally, an SPG organic certificate is needed to legally label Agrofuel as a certified organic product.
Product/ Service Description	Agrofuel is an organic fertilizer we create by composting local agro-industrial waste. We blend this with Elephant grass, wood dust, topsoil, and Californian red worms. Our process directly addresses serious environmental problems, such as land degradation, agricultural greenhouse gas emissions, and toxic chemical runoff into nearby water sources. We turn untreated waste into a valuable soil amendment. This provides great agricultural benefits to farmers and growers, improving moisture retention, boosting soil microbial life, and offering safe, slow-release nutrition for crops at a much lower cost than imported chemical inputs. We have fully incorporated environmental sustainability, industrial cooperation, and social responsibility into Agrofuel. This provides a clean, eco-friendly option that restores soil health while preventing the harmful burning of agricultural waste in local communities.

Circular Economy

A circular economy is a model that minimizes waste and regenerates natural ecosystems by keeping materials in continuous use at the highest utility value. We follow this concept, because we grab the organic local wastes and transform them into fertilizer to heal world naturally. We implement a circular economy to transform agricultural or industrial waste streams directly into valuable, revenue-generating products like biofertilizers.

Marketing Plan

- *Market Research*

Describe the results obtained in your market research survey, like: are most of your potential consumers answering that they are willing to buy your product? Is the majority of them mentioning that they going to pay the suggested price? Is a minor percentage of them mentioning that they are environmentally friendly or like to buy eco-friendly products?

The market research survey, which had 53 total respondents, confirms strong consumer validation and high purchase intent for Agrofuel. A significant majority of 83% stated they consider the suggested price of Gs. 45,000 for a 20 kg bag to be fair, while

22.6% even viewed it as very cheap, demonstrating excellent price acceptance. Furthermore, environmental consciousness is high among potential buyers, with 75.5% rating soil regeneration as very important and the majority favoring organic compost over synthetic fertilizers. Notably, 52.8% of respondents currently do not use fertilizers regularly, highlighting a massive, untapped market segment for Agrofuel to capture through direct educational outreach.

- *Barriers to entry*

Mention the potential barriers you might encounter when entering to this new market as a company competing with others in the same industry.

Entering the fertilizer market in Paraguay presents certain obstacles. Established brands have been selling for years and have already earned the trust of farmers, who are often reluctant to switch products. We must also comply with legal procedures and mandatory certifications, such as SENAVE registration and SPG endorsement before we can sell freely. Finally, major brands already occupy prime shelf space in agricultural supply stores and possess the heavy machinery that we still need to acquire for large-scale production.

- *SWOT analysis*

SWOT Analysis Worksheet

	Strengths	**Weaknesses**	**Opportunities**	**Threats**
Product/ Service Offering	We have an innovative product	The product we choose take a long of time.	We can give our product to other businesses for them to resell it	Our competitors have more experience
Brand/ Marketing	Is a product that we promote mostly by word of mouth and customer reviews	We don’t have a lot of contacts for the marketing	We can make a lot of options for logo.	We have competitors which are more popular and have better quality.
Staff/HR	Are the most helpful persons that you'll meet	They can sometimes go off topic from the product topic	We learned from the best professionals how to make soil fertilizer	We lack logistics and quantity of staff to make us the best soil fertilizer in the country

Finance	We have a good initial capital	We still do not generate profit	We have a cheap supplier	The prices of the materials can increase sometimes.
Operations/ Management	We have a strong leadership	We don't manage our process to	We have the teachers that can guide us	Our lack of machinery
Market	Our product is very useful cause we are an agricultural country.	We still don´t have the logistic necessary to reach all the market.	We can incorporate very easy cause a lot of people need our product.	Our competitors have more time in the market than us.
Can any of your strengths help with improving your weaknesses or combating your threats? If so, please describe how below.				
Yes, our good communication as a team and all the contacts we have can help us to reach better logistics and reach more people in the country.				
Based on the information above, what are your immediate goals/next steps?				
leverage your strong initial capital, expert mentorship, and low-cost suppliers to establish wholesale agreements with local agricultural supply stores, expanding market reach without heavy logistics costs.				
Based on the information above, what are your long-term goals/next steps?				
Acquire industrial machinery to scale production, enabling Agrofuel to overcome logistics limits and expand distribution across all of Paraguay.				

- *Product/Service features and benefits.*

Our product gives our customers the guaranty that their plants will grow and develop faster than usual. This product guaranties to help the planet go greener and we are compromised to make our customers happy and greener. Our customers choose our products before the competition because they trust us and know the value of our product.

Agrofuel differentiates from others, because of a specialized organic formula that combines upcycled sugarcane ash and yerba mate dust with Eisenia fetida vermicompost, delivering a balanced nutrient profile that basic composts can't match. Its physical structure with elephant grass fiber and wood dust boosts soil moisture retention by up to 30% and prevents nutrient leaching.

- *Target customer*

  Small-to-medium produce growers, nursery managers, and eco-conscious agricultural co-op members in Asunción and surrounding agricultural zones who face depleted soil structure and inflated chemical fertilizer prices.

- *For consumers*

Sold at Gs. 45,000 per 10 kg bag, it offers a budget-friendly alternative to synthetic fertilizers. It preserves long-term land fertility and comes in manageable bag sizes for easy manual application.

- *For businesses*

Agrofuel provides local agro-stores with high retail margins driven by our low raw material costs. Rapid seasonal stock turnover delivers steady repeat sales while expanding their sustainable product lineup.

Key competitors

Chemical Importers (Agrotec, GPSA, Tecnomyl): Control market share with fast-acting synthetic NPKs but carry high prices and degrade soil long-term.

Industrial Organic Producers (Organitec Fertilizantes S.A.): Produce large-scale organo-mineral fertilizers focused on large corn and soybean growers rather than smallholders.

Factors Affecting supply and demand

Factors affecting Supply	Measures to control or minimize its effect
1. Increase in production costs	Improve efficiency, find cheaper suppliers, reduce waste.
2. Shortage of raw materials or components	Diversify suppliers and maintain inventory reserves.
3. Government regulations and taxes	Comply with regulations and seek tax incentives when available.
Factors affecting Demand	Measures to control or minimize its effect
The income of the buyers	Make affordable products, that our main targets could buy.
The complements that we can have for our product, like seeds.	We can put our products in the same places as the other products
Substitutes of our product	We must make a product that makes us different from the others.

Competitor Data Collection Plan

AgroFuel S.R.L Granja Natural S.A

Price	Gs. 45,000 per 10 kg bag (Gs. 4,500 / kg)	Gs. 60,000 – Gs. 80,000 per 25 kg bag (approx. Gs. 2,400 – Gs. 3,200 / kg depending on product line)
Benefits/Features	Organo-mineral formula combining sugarcane ash, yerba mate dust, animal manure, and minerals; vermicomposted with red worms. Dual-action mechanisms for immediate biological nutrition and physical soil structure restoration, creating moisture retention and disease suppression.	Produces traditional vermicompost, general organic compost, and specialized granulated organic fertilizer (Organimax). Focuses on general soil amendment, microbial activity, and macro/micronutrient supply.
Size/profitability	Emerging brand targeting local small farmers, rural horticulturists, and eco-conscious producers searching cost-effective alternatives.	Established national presence across Paraguay; distributed through agro-dealers, retail nurseries, and direct agricultural channels.
Market strategy	Value-based competitive pricing, localized direct-to-farm distribution paired with a planned Participatory Guarantee System framework to build community trust through transparent, open-door production.	Commercial distribution network relying on traditional retail channels, broader product line diversification and institutional branding.
	Internal Project Specifications and Market Survey Data	Official corporate website and digital product catalog. Official Instagram account and social media commercial listings (@granjanaturalsa).

Possitioning/Niche

AgroFuel operates on the agricultural niche. We want our product to be positioned as an affordable, high-performance organic alternative to expensive imported synthetic chemical fertilizers. By targeting small-to-medium Paraguayan growers who face rising input costs and soil degradation, Agrofuel positions itself not just as a crop input, but as an accessible circular-economy solution that actively restores long-term soil health, biological fertility, and farm yields at a competitive local price point

Radio, because this remains the most trusted and widely accessible medium in rural Paraguay. Smallholder farmers listen to agricultural news reports while preparing for farm work early in the morning. It will be only 30-second audio spots broadcast 3 times per week, on Mondays, Wednesdays, and Fridays during peak morning agricultural segments on regional rural stations.

Online, because Facebook is heavily used across rural Paraguayan communities. Geo-fenced Meta video ads localized to agricultural zones, such as Central, Cordillera, and Paraguarí directly showcase real crop yield improvements with a single click to WhatsApp button for instant order. This will be continuous seasonal campaigns running 4 days a week, on Thursday through Sunday during key soil preparation and planting windows

Print, because farmers regularly visit local agricultural supply stores to purchase seeds and tools. Leaving physical brochures and flyers with simple visual application guides and QR codes directly at point-of-sale counters catches buyers at the moment of purchase decision. The material stocks replenished monthly across partner retail stores, aligned with regional planting cycles.

Out-of-Home, it will be physical banners placed at cooperative entrances, local agricultural supply hubs, and regional trade expos establish local brand presence and trust. There gonna be permanent display banners updated quarterly at key agricultural retail hubs, supplemented by temporary event banners during regional agricultural expose.

We will use mobile marketing, because WhatsApp is the most popular communication platform in Paraguay. It provides a direct line for smallholders to place orders, share field photos for technical advice, and receive application guides without needing a formal website. There will be bi-weekly broadcasts containing seasonal soil tips, application instructions, and direct order processing links.

We are using also Networking & Field Visits, because agricultural decisions in Paraguay depend heavily on trust and personal relationships. Conducting direct field visits with smallholders, cooperative managers, and agricultural leaders allows Agrofuel to demonstrate soil health benefits firsthand. We are going to do weekly farm visits across targeted agricultural districts, prioritizing key cooperative hubs twice a month.

Finally, we chose Word-of-Mouth & Referrals, because Paraguayan farmers rely heavily on recommendations from neighboring growers. Proven crop improvements naturally generate organic word-of-mouth recommendations, which are incentivized through a structured discount referral program. We are going to continuously offer to existing customers upon delivering complete orders.

We want to project an image of innovation, environmental stewardship, and local reliability.

Logo:

· Color Palette:

· Packaging: Recyclable eco-bags with clear icon guides and prominent QR codes for quick scanning.

· Stand Design: Trade show booths featuring raw wooden textures, living plant comparisons, and acrylic worm-farm observation displays.

Brand Alignment: These visuals reinforce Agrofuel as a clean, backed fertilizer that transforms local waste into soil energy.

Promotional budget

PROMOTIONAL BUDGET

Use the same media/tools and channels from your Communication Plan. Research or estimate the real cost of each paid activity.

Media / Tool	Channel / Means	Action / Description	Budget Type	Cost per Unit (Gs.)	Quantity	Times per Month	Estimated Cost (Gs.)	Source / Cost Evidence
Social Media Marketing	Instagram	A product usage example video	Before Startup	Gs. 600.000	16,00	2,00	Gs. 9.600.000	Instagram.com
Social Media Marketing	Website	Showing all the product line	Ongoing	Gs. 200.000	15,00	1,00	Gs. 3.000.000	by reasearching with the providors of those products/ services
Social Media Advertising	Youtube ads	Promote the product website	Ongoing	Gs. 60.000	8,00	2,00	Gs. 960.000	by reasearching with the providors of those products/ services
Social Media Advertising	meta ads	Promote the product website	Ongoing	Gs. 30.000	8,00	2,00	Gs. 480.000	by reasearching with the providors of those products/ services
Print Advertisement	Flyers	Promote the product website and instagram	Ongoing	Gs. 20.000	100,00	2,00	Gs. 4.000.000	https://pixxel.com.py/
Print Advertisement	Posters	Promote the product website and instagram	Ongoing	Gs. 6.000	310,00	2,00	Gs. 3.720.000	https://www.copycenter.com.py/

We need those startup expenses because we need it for our marketing budget , and the

monthly promotional expenses because we need our brand to be recognizable and be respected among our peers

Marketing Expenses Strategy Chart

	Target Market 1: Smallholder Farmers (Direct Sales)	**Target Market 2: Agro-stores & Distributors**	**Target Market 3: Nurseries & Urban Gardens**
One-Time Expenses	**Gs. 1,200,000** • Logo design & official 20 kg packaging graphics. • Physical sign for main business venue.	**Gs. 1,500,000** • Banner & point-of-sale display stands. • Initial batch of free product samples for retailers.	**Gs. 800,000** • Printed product catalog. • Setup and branding for official social media profiles.
Monthly or Annual Expenses	**Gs. 800,000 / month** • Early-morning rural radio ads (3x/week). • Targeted Meta video ads in Facebook and Instagram.	**Gs. 400,000 / month** • Restocking technical flyers for store counters. • Annual fee for regional agricultural expos (amortized).	**Gs. 300,000 / month** • Localized social media ads target gardeners. • Sample logistics for urban nurseries.
Labor Costs	**Gs. 1,500,000 / month** • Direct sales commission. • Travel stipend for farm field visits.	**Gs. 1,800,000 / month** • Technical sales advisor for B2B account management. • Travel and meeting expenses with cooperative leaders.	**Gs. 600,000 / month** • Part-time digital customer support & WhatsApp Business management.

Pricing Strategies

Name of the company		
Which of the pricing strategies are you using?		
Skimming	**Value Based** ☑	**Cost – Plus**

AgroFuel utilizes a hybrid Cost-Plus and Value-Based Pricing Strategy to price our core product line: 10kg bags of specialized vermicompost organo-mineral biofertilizer. Our cost structure forms the baseline floor: with total initial production costs calculated at Gs. 45.000.000 per 1,000 bags, 45,000 PYG per bag including raw material aggregation, biological worm asset maintenance, packaging, and monthly fixed location overhead), a Cost-Plus approach ensures operational viability. We apply a 62.5% markup to establish a proposed selling price of 48,000 PYG per 10kg bag. To ensure market adoption, this pricing is cross-validated with Value-Based pricing principles: imported chemical fertilizers in Paraguay subject local horticulturists to high prices and soil degradation (acidification and water retention loss). AgroFuel delivers superior economic value by providing a slow-release, nutrient-dense soil amendment that restores long-term land fertility and improves crop moisture resilience during droughts. Industry practices in Paraguay heavily rely on expensive imported synthetic inputs. By pricing AgroFuel below imported chemical alternatives while offering higher biological value and community-led Participatory Guarantee System (SPG) trust, we remove purchase barriers for smallholder farmers while maintaining financial sustainability. Points to discuss with the instructor include potential volume discount tiers for regional agricultural cooperatives and contingency margins for shifting raw material transportation costs Pricing Decision Paragraph

AgroFuel's proposed selling price is 45,000 PYG per 10kg bag, established using a hybrid Cost-Plus and Value-Based Pricing Strategy. This strategy is uniquely suited for our bio-fertilizer because it balances our internal cost structure with the financial realities of smallholder horticulturists in Paraguay. From a production perspective, our unit cost is approximately $3.00 USD per 10kg bag, calculated from

our initial investment of 45.000.000 to yield 1,000 units, which covers local input collection (manures, wood residues, and topsoil), worm population maintenance, breathable packaging, and monthly facility overhead. Applying a Cost-Plus markup guarantees a healthy gross profit margin (~38%) to sustain business operations and future scaling. Simultaneously, competitor research shows that small-scale Paraguayan farmers are trapped by expensive imported synthetic chemical fertilizers that cause severe long-term soil acidification and moisture loss. Value-Based pricing allows us to set a price point significantly lower than imported chemical products while capturing the higher perceived value of AgroFuel's biological benefits,

such as enhanced water retention, disease suppression, and microbial restoration. This price is directly targeted to fit the limited budgets of local horticulturists, eliminating purchase barriers while positioning AgroFuel as an affordable, high-performing, and sustainable eco-friendly alternative in the Paraguayan market.

Distribution Channel Assessment Worksheet

	Direct-to-Farm Sales	Agricultural Cooperatives	Online Catalog
Ease of Entry	Requires building trust through direct relationships with local farmers and offering product demonstrations or samples.	Cooperatives often have strict quality compliance standards, supplier evaluation processes, and longer negotiation timelines.	Quickly launch via an interactive website or online store, but requires driving web traffic and brand awareness.
Geographic Proximity	Focused on nearby local agricultural producers, smallholders, and regional farms to keep initial delivery logistics simple.	Leverages existing regional coop supply hubs, agro-supply stores, and distribution warehouses across rural zones.	Not constrained by location for orders, though physical shipping and delivery distances must be managed.
Costs	150.000Gs	150.000Gs	150.000Gs
Competitors' Positions	Traditional chemical fertilizer representatives and local manure traders visit farms directly, but organic	Established commercial fertilizer brands dominate shelf space and bulk	Fewer direct digital competitors selling specialty organic fertilizer online, offering a clear

	options are less dominant.	inventory in traditional cooperatives.	opportunity to stand out.
Management Experience	Requires sales negotiation skills, hands-on client relationship management, and scheduling farm visits.	Requires structured channel management, contract negotiation, and managing key business accounts.	Requires digital product catalog management, order processing, and customer support coordination.
Staffing Capabilities	Needs commercial staff dedicated to visiting farms, handling inquiries, and delivering orders locally.	Needs dedicated staff to manage cooperative buyer relationships and oversee bulk order fulfillment.	Needs staff to manage online inquiries, catalog updates, order packaging, and dispatching.
Marketing Needs	Requires product samples, technical data sheets, on-farm trials, word-of-mouth promotion, and flyers.	Requires co-op promotional materials, trade discounts, technical certifications, and margin incentives for sales reps.	Requires social media ads, targeted online marketing, SEO, an interactive product catalog, and clear technical filters.

Pronóstico de Venta de 12 meses/ 12-month sales forecast

Para la proyección de nuestras ventas hemos tenido en cuenta el punto de equilibrio que fue de 649 unidades, además hemos estimado un aumento en las ventas mensuales en una escala de 15 unidades por mes y el precio estimado para la comercialización es de 45.000 Gs. por unidad. Esta proyección nos sirve para conocer los posibles ingresos que tendría la comercialización de nuestro producto.

En el siguiente cuadro presentamos las ventas por el mes de Enero y total por el periodo de un año.

Presupuesto de Ventas			
N°	**Producto**	**Proyección de Ventas**	
		Mensual en Gs.	Anual en Gs.
1	**Abono Organico**		
	Cantidad Vendida	1.909	23.241
	Precio x Unidad	45.000	45.000
	Total Gs.	85.892.940	1.045.835.280

Plan Operativo

- Producción

  Los insumos orgánicos —pasto elefante (*Cenchrus purpureus*), aserrín de madera, gallinaza con cascarilla de arroz, estiércol vacuno y suelo arable— son introducidos

en el módulo de compostaje para iniciar la fase de secado y estabilización. Este proceso de deshidratación previa es fundamental para condicionar el sustrato a un nivel de humedad e higiene óptimos, garantizando así la máxima eficiencia biológica de la lombriz roja californiana (*Eisenia fetida*) en la producción del vermicompost mixto.

- Control de Calidad

Primero, se realiza la limpieza y selección de las materias primas para eliminar impurezas físicas como piedras o plásticos, protegiendo así a las lombrices y la maquinaria. Segundo, durante la producción se miden la humedad, temperatura y pH para mantener el entorno biológico óptimo de descomposición y evitar que el abono llegue fermentado o queme las raíces. Finalmente, se efectúa un tamizado fino e inspección de empaque para lograr una textura uniforme y un sellado hermético en las bolsas de 10 kg, garantizando que los microorganismos se conserven vivos y sin humedad hasta llegar al cliente.

- Ubicación

Avenida Manuel Ortiz Guerrero casi Avelino Martínez N° 1420, San Lorenzo, Departamento Central.

- Entorno jurídico

Empresa formada bajo el régimen de Sociedad de Responsabilidad Limitada-S.R.L- con un capital social de 85.000.000 Gs. en cuotas iguales entre los cinco socios, en donde cada uno le corresponde 100 cuotas de 170.000 Gs. Todos los socios responden ante las obligaciones sociales sólo hasta el valor de sus aportes.

La denominación social debe llevar los términos “Sociedad de Responsabilidad Limitada” o su sigla (S.R.L.). Su omisión hará responsable ilimitada y solidariamente al gerente por los actos que realice en esas condiciones.

Esta sociedad no está habilitada para realizar operaciones bancarias, de seguro, de capitalización y ahorro, ni aquellas para las cuales las leyes exijan otra. El capital social debe estar totalmente suscripto y por lo menos el 50% debe estar integrado en dinero efectivo, completándose la integración en un plazo no mayor de dos años.

No hay requisito de capital mínimo, pero éste debe ser suficiente para cumplir con el objeto de que se proponga la SRL.

El capital social puede ser incorporado también en especie o en activos fijos, que deberán ser transferidos a nombre de la sociedad en el documento de constitución o bien una vez que el contrato social haya sido inscripto en el Registro Público de Comercio. Los socios continúan siendo responsables solidariamente ante terceros por el valor de los bienes y activos en especie incorporados como capital.

La S.R.L. podrá operar una vez que el contrato social haya sido inscripto en el Registro Público de Comercio, previa protocolización.

El proceso de gestión o administrativo resulta en un pedido realizado por el Escribano Público quien presentará una nota firmada por el representante legal de la Sociedad al Juez de Turno en lo Civil y Comercial.

Tuvimos en cuenta para la formalización cumplir con los siguientes pasos para la apertura de una Sociedad de Responsabilidad Limitada

Trámites para la apertura de una SRL (aquí nombran la institución y breve explicación de las obligaciones)

1. Recurrimos a la Escribanía para la Constitución por Escritura Pública
2. Depositamos el capital en concepto de Garantía en el Banco Nacional de Fomento.
3. Inscripción en Reg. Público de Comercio y en el Registro de personas jurídicas y asociaciones.
4. Publicación de la Constitución de la Sociedad.
5. Inscripción en la DNIT para obtención del R.U.C.
6. Matrícula de Comerciante.
7. Rubricar los libros contables exigidos.
8. Inscripción Municipal y Solicitud de Patente Comercial.
9. Inscripción Patronal I.P.S.
10. Inscripción Patronal M.T.E.S.S.
11. Registro de Marca D.I.N.A.P.I.
12. Otros: SENAVE, MADES, etc.

Algunas Obligaciones fiscales

IVA: es un impuesto que grava cada una de las fases de la comercialización del bien hasta que llegue al consumidor final, pero no grava el importe total de cada venta en forma independiente sino como su nombre lo indica, exclusivamente sobre el valor añadido en cada etapa por cada agente económico. Se liquida mensualmente y se determina por la diferencia entre el débito y crédito fiscales. Tasa: 10%

IRE: Es la abreviatura que se utiliza para referirse al Impuesto a la Renta Empresarial. Es un Impuesto establecido por ley, para aquellas personas que se dediquen a la realización de actividades en forma de empresas, ya sea a través de un particular o una sociedad. Su liquidación se hace luego de terminado el año. Tasa: 10% sobre la utilidad antes de impuestos

IDU: gravará las utilidades, los dividendos o los rendimientos, puesto a disposición o pagados a personas físicas o jurídicas residentes o no. Se liquida al momento que se decida la distribución de los dividendos o utilidades. Tasa: 8% para residentes y 15% para no residentes

Patente comercial: este tributo se abona a la municipalidad donde se encuentre la propiedad que se alquila. Es un impuesto que debe pagar todo aquél que desee ejercer o ejerza una actividad lucrativa, ya sea industrial, comercial o profesional. El mismo se aplica tanto a personas naturales que inician una actividad, como a empresas.

- Personal

We are looking to hire employees for various positions within our company. Specifically, we need key department heads and management personnel who meet specific educational requirements and professional skills in their respective fields. On the other hand, for support roles such as Production Assistants and Secretaries, there are no strict educational requirements. We also hire outsourced specialists like Cleaners, Accountants, Agronomists, and Logistics providers to support our operations.

We will begin with a core team of 9 positions, which includes the CEO/General Manager, department heads, support staff, and outsourced professionals. As we grow and expand, we will likely need to hire additional employees.

We plan for most of our workforce to be directly employed by our company, as we believe in building a dedicated team. However, for specific specialized needs

like financial reporting, agronomic oversight, labor law compliance, and delivery logistics, we utilize professional fee contracts and external advisors.

Below are the job descriptions and team roles:

- CEO / General Manager: Responsible for managing enterprise assets, leading branch heads, and overall company administration. Lacks prior formal background in corporate governance or industrial-scale management; supported by External Financial & Legal Counsel for tax, SET compliance, and business structuring.
- Production Manager (Jefe de Producción): Oversees quality control protocols, batch consistency, and raw material processing. Lacks formal qualifications in agronomy, chemical engineering, or large-scale vermicomposting; supported by a Senior Agronomist / Vermicomposting Specialist for SENAVE testing and chemical balance.
- Sales Manager (Jefe Comercial): Drives client acquisition, commercial negotiations, and manages sales assets. Has limited experience with corporate B2B sales pipelines and structured credit negotiations; supported by a Commercial Mentor specializing in agricultural sales networks.
- Marketing Manager: Directs marketing efforts, focusing on brand awareness, timely content deployment, and social media channels. Requires further technical expertise in digital analytics, paid media strategy, and agro-market branding; supported by a Digital Marketing Consultant for campaign optimization and rural radio outreach.
- HR & Administration Manager (Jefe Administrativo): Manages internal team culture, conflict resolution, staff relations, administrative tasks, and operational support. Has limited experience in formal labor law, IPS compliance procedures, and industrial HR policy; supported by a Labor Law & HR Advisor for IPS enrollment and workplace safety compliance.
- Production Assistant: Supports daily plant operations, raw material pre-treatment, hydration checks, and substrate handling. No formal education required.
- Secretary: Provides administrative support, documentation management, scheduling, and customer communication. Strong organizational skills required.
- Agricultural Engineer (Outsourced): Serves as a technical advisor responsible for monitoring biotransformation metrics, substrate chemical composition, and biofertilizer quality assurance.

- Accountant (Outsourced): Handles financial records, SET tax compliance, payroll distribution, and financial reporting.
- Delivery / Logistics (Outsourced): Manages product transportation, distribution logistics, and client order deliveries.

Our pay structure varies by role:

- Salaried Personnel & Executive Remuneration: Key leadership roles—including the CEO (6.500.000 PYG base), Administrative Manager (4.000.000 PYG base), Sales Manager (4.000.000 PYG base), and Production Manager (4.000.000 PYG base)—receive fixed monthly salaries subject to standard taxes or IPS contributions (9%). Operational roles such as Production Assistant (3.044.000 PYG base) and Secretary (3.044.000 PYG base) are also directly salaried with standard IPS deductions.
- Professional Fees & Outsourced Services: External specialists are compensated according to professional service agreements subject to IVA deductions, including the Agricultural Engineer (1.500.000 PYG fee), Accountant (1.000.000 PYG fee), and Delivery/Logistics provider (3.000.000 PYG fee).

We plan to find qualified employees and contractors by posting job openings on popular job portals like LinkedIn and Indeed, and by leveraging professional networks. For key roles, we may work with recruitment agencies to identify top talent. We will also encourage referrals from current employees and use freelance platforms like Upwork for specialized contractors. Local advertising will help us attract reliable workers for roles that do not require formal education. This approach ensures we connect with the right candidates to support our growth.

Employees will need training specific to their roles, including onboarding, company policies, and job-specific skills. We will provide this through a combination of in-house training sessions, online courses, and direct mentorship programs with our external advisors, ensuring everyone is well-prepared and aligned with our company standards.

- Inventario

La materia prima que necesitamos para la elaboración de nuestro producto es de fácil adquisición y es por ello por lo que hemos optado por mantener un stock mínimo de 15 unidades por mes. Nuestro producto no necesita de refrigeración, pero si de un almacenamiento que cumpla con los estándares de higiene y salubridad.

Teniendo en cuenta que la materia prima posee buena disponibilidad y siendo un producto orgánico o natural o sin químicos hemos planificado una producción mensual de tal forma a no necesitar contar con un stock de materia prima muy alto. Nuestro producto una vez listo tendrá un vencimiento de 12 a 24 meses. En el siguiente cuadro proyectamos las compras de materia prima por el periodo de 1 año.

PRESUPUESTO DE COMPRA DE MATERIA PRIMA						
MATERIA PRIMA	**ASERRIN**	**CAMERÚN**	**ESTIERCOL VACUNO**	**GALLINAZA**	**TIERRA**	**LOMBRICES CALIFORNIANAS**
CANTIDAD	23.241	23.241	23.241	23.241	23.241	23.241
PRECIO	200	500	600	500	300	1.000
TOTAL	4.648.157	11.620.392	13.944.470	11.620.392	6.972.235	23.240.784

- Proveedores

Estiércol Animal / Residuo Ganadero:

Proveedor: Estancia Ganadera Familiar: Función: Proveedor principal de la materia orgánica base para la lumbricultura.

Ceniza de Caña de Azúcar:

Proveedor: Ingenios azucareros e industrias locales de procesamiento de caña. Función: Suministro de residuos industriales ricos en potasio y minerales esenciales. Polvillo de Yerba Mate:

Proveedor: Secaderos y yerbales de la región. Función: Aporte de materia orgánica carbonatada y micronutrientes.

Lombrices (Eisenia fetida) y Sacos de 20 kg:

Proveedor: Criaderos locales de lombricultura y distribuidores de envases plásticos agroindustriales.

Función: Pie de cría para descomposición biológica y empaque oficial.

- Política de crédito

Hemos proyectado que la mayoría de las ventas iniciales sean al contado para asegurar la liquidez y el capital de trabajo de la empresa. Sin embargo, con el fin de incentivar el volumen de compra y construir relaciones comerciales duraderas en el sector agropecuario, estaremos dispuestos a otorgar financiamiento bajo las siguientes modalidades:

Ventas al Contado (100%): Aplicable para compras minoristas, clientes individuales de huertas/jardines y las primeras transacciones con nuevos clientes.

Crédito Comercial B2B (30 días): Otorgado a agroganaderas, cooperativas y distribuidores aliados (previo análisis de su perfil crediticio y comercial), bajo la modalidad de abonar el 50% al contado al momento de la entrega de los sacos de 20 kg y el 50% restante a 30 días de plazo

Management Worksheet

Marco Domaniczky

Bio/s	• Marco Domaniczky (CEO): Responsible for managing enterprise assets, leading branch heads, and overall company administration.
Gaps in Management or Experience	Lacks prior formal background in corporate governance or industrial-scale management
Advisors	External Financial & Legal Counsel (Tax/SET compliance & business structuring).

Bio/s	Juan Sebastian Cantero leads Production, overseeing quality control protocols, batch consistency, and raw material processing.
Gaps in Management or Experience	Lacks formal qualifications in agronomy, chemical engineering, or large-scale vermicomposting.
Advisors	Senior Agronomist / Vermicomposting Specialist (SENAVE testing & chemical balance).

Lucas Quevedo

Bio/s	He serves as Sales Manager, driving client acquisition, commercial negotiations, and managing sales assets.

Gaps in Management or Experience	Limited experience with corporate B2B sales pipelines and structured credit negotiations.
Advisors	Commercial Mentor (experienced input distributor for agricultural sales networks).

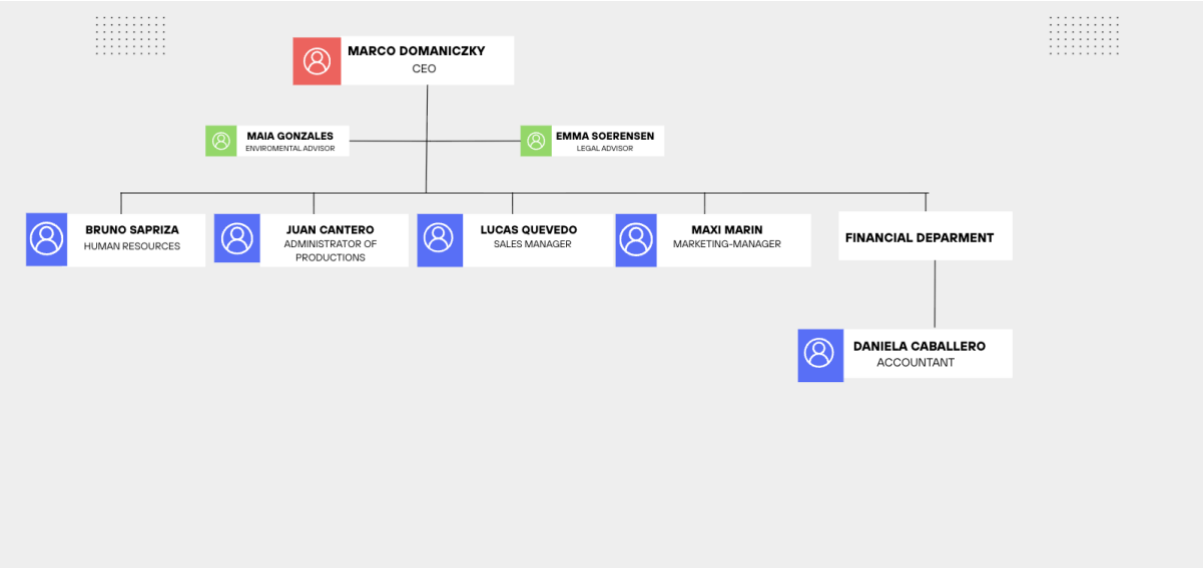

Maximiliano Marin

Bio/s	He directs Marketing efforts focusing on brand awareness, timely content deployment, and social media channels.
Gaps in Management or Experience	Requires further technical expertise in digital analytics, paid media strategy, and agro-market branding.
Advisors	Digital Marketing Consultant (campaign optimization & rural radio outreach).

Bruno Sapriza

Bio/s	Managing internal team culture, conflict resolution, and staff relations.
Gaps in Management or Experience	Limited experience in formal labor law, IPS compliance procedures, and industrial HR policy.
Advisors	Labor Law & HR Advisor (IPS enrollment & workplace safety compliance).

Organization Chart

Gastos Iniciales y Capitalización

- Gastos de puesta en marcha

  Para la puesta en marcha de nuestra empresa necesitamos:

  Abonar por los gastos de Apertura

Alquilar un inmueble cuya ubicación sea dentro del departamento central.

Comprar bienes del Activo Fijo como escritorios, sillas, mesa de trabajo, estantes, y utensilios de cocina, además necesitamos invertir en instalaciones y adquirir maquinarias para la elaboración de nuestro producto como ser trituradora, horno y un refrigerador.

Comprar los insumos necesarios para inicial la elaboración de nuestro producto.

- Balance del día de apertura

Debe	Haber
Caja 85.000.000 Gs.	Capital 85.000.000 Gs.

La suscripción e integración del capital se concreta 100% en efectivo.

- Estado financiero personal

Plan Financiero

- Proyección de pérdidas y ganancias a 12 meses

AgroFuel SRL	
Estado de Perdida de Ganancias	
Ventas	1.045.835.280
Costo de Ventas	72.046.430
Utilidad Bruta	973.788.850
Gastos Operativos	438.210.643
Utilidad Antes de Impuestos	535.578.207
Impuesto a la renta empresa	53.557.821
Utilidad Antes de la Reserva	482.020.386
Reserva Legal	24.101.019
Utilidad Neta	457.919.367

Según los datos que generamos con el proyecto en el primer año tendríamos una utilidad neta de Gs. 457.919.367.

- Proyección de pérdidas y ganancias a 3 años – opcional
- Proyección de flujo de efectivo

Hemos proyectado el flujo de efectivo teniendo en cuenta la inversión inicial, los principales gastos fijos tales como: citar los más importantes, además el pago a proveedores. Y disponiendo como ingreso el aporte inicial y el cobro por la venta de nuestro

producto.

En esta proyección podemos visualizar como queda conformado el patrimonio de la empresa al finalizar el periodo de 1 año.

- Cálculo del punto de equilibrio

Break-Even formula

$$BEP = \frac{\text{Fixed Costs}}{(\text{Price per unit} - \text{Variable unit cost})}$$

BEP= 662,5042

FIXED COST (Gastos mensuales) =		0			
		27.588.000		BEP=	662,5042
		27.588.000			
PRICE PER UNIT (Precio de venta)		45.000			
Profit	45%	1511,1			
VARIABLE UNIT COST (Precio de costo)		3.358			

- Uso del capital

El proyecto será financiado 100% con fuente propia. A continuación, se presenta el cuadro de la inversión total.

Nuestra Inversión total es de Gs. 85.000.000 que se compone de:

1. Activo Fijo que son los bienes que necesitamos para el funcionamiento de nuestro negocio.
2. La inversión preoperativa se da por los gastos que genera la formalización de la empresa como la escritura de constitución, y los demás tramites en las diversas instituciones.
3. El capital de trabajo es básicamente los recursos financieros que la empresa necesita para continuar funcionando y realizar sus actividades. El capital de trabajo es una herramienta que asegura que el negocio continuará operativo, incluso enfrentándose a una escasez de recursos para pagar sus gastos básicos, y es por eso por lo que es crucial para cubrir los gastos operativos y los costos de producción.
