Asunción, Paraguay

March to September 2026

Executive Summary (English)

ReHeat is an eco-sustainable project dedicated to transforming discarded plastic and metal waste into a reusable, click-activated heat pack. Instead of letting this waste end up in landfills, LDPE plastic is washed, cut, and shaped into the pack's casing, and salvaged tin or bottle cap steel becomes the metal trigger disc, combined with a sodium acetate solution that crystallizes on demand to produce instant, reusable heat, packaged for hundreds of reuse cycles.

We are a team of five high school students — Sofia, Giuliano, Stephanie, Isabella, and Antonella — who came together because we saw how much plastic and metal waste our own city produces every day, and wanted to build something that actually does something about it.

The overabundance and waste of single-use plastics and scrap metal is a real problem in Paraguay, discarded in large quantities by households, workshops, and small industry every day. With creativity and a commitment to sustainability, ReHeat turns this waste into an opportunity.

Our target customers are men and women aged 18 to 35, primarily in Asunción and Gran Asunción, of middle to upper-middle social status, who value natural, reusable products, honest claims, and sustainability, and are willing to support local brands that share those values.

Our distribution channels include direct sales through our website, social media, and WhatsApp, along with select local partners across Asunción.

Our main competitors are Profit by Siegen S.A., Punto Farma, and Sumed/Farmaoliva. Within the wellness and personal care industry, there is a strong market trend toward eco-sustainable products, and Paraguayan consumers increasingly support brands that share these values. Our main differentiating factor is turning discarded plastic and metal waste into a functional, reusable heat therapy product, while keeping our packaging reusable to extend that same sustainability commitment to how the product is delivered.

We are currently developing two casing options — one in PVC plastic, and another in biodegradable plastic — to compare which performs best before finalizing the material for production.

The production cost per unit is ₲14,080, and the final price to the customer is ₲50,000, leaving enough margin to cover fixed costs and generate a profit for the business.

Executive Summary (Spanish)

ReHeat es un proyecto ecosostenible dedicado a transformar residuos de plástico y metal descartados en un paquete de calor reutilizable, activado con un clic. En lugar de dejar que estos residuos terminen en vertederos, el plástico LDPE reciclado se lava, corta y moldea para formar la carcasa del paquete, y el acero de latas o tapas de botella recuperadas se convierte en el disco metálico activador, combinado con una solución de acetato de sodio que se cristaliza a demanda para producir calor instantáneo y reutilizable, listo para cientos de ciclos de uso.

Somos un equipo de cinco estudiantes de secundaria — Sofía, Giuliano, Stephanie, Isabella y Antonella — que nos unimos porque vimos cuánto residuo plástico y metálico genera nuestra ciudad cada día, y quisimos construir algo que realmente hiciera una diferencia.

El exceso y desperdicio de plásticos de un solo uso y chatarra metálica es un problema real en Paraguay, descartado en grandes cantidades por hogares, talleres e industrias pequeñas cada día. Con creatividad y compromiso con la sostenibilidad, ReHeat convierte este residuo en una oportunidad.

Nuestros clientes objetivo son hombres y mujeres de 18 a 35 años, principalmente en Asunción y Gran Asunción, de nivel socioeconómico medio-alto, que valoran los productos naturales, reutilizables, las afirmaciones honestas y la sostenibilidad, y que están dispuestos a apoyar marcas locales que compartan esos valores.

Nuestros canales de distribución incluyen ventas directas a través de nuestro sitio web, redes sociales y WhatsApp, junto con socios locales seleccionados en Asunción.

Nuestros principales competidores son Profit by Siegen S.A., Punto Farma y Sumed/Farmaoliva. Dentro de la industria de bienestar y cuidado personal, existe una fuerte tendencia del mercado hacia productos ecosostenibles, y los consumidores paraguayos apoyan cada vez más a las marcas que comparten estos valores. Nuestro principal factor diferenciador es convertir residuos de plástico y metal descartados en un producto funcional y reutilizable de terapia térmica, manteniendo además nuestro empaque reutilizable para extender ese mismo compromiso de sostenibilidad a la forma en que se entrega el producto.

Actualmente estamos desarrollando dos opciones de carcasa — una en plástico PVC y otra en plástico biodegradable — para comparar cuál funciona mejor antes de finalizar el material para producción.

El costo de producción por unidad es ₲14.080, y el precio final al cliente es ₲50.000, dejando margen suficiente para cubrir costos fijos y generar una utilidad para el negocio.

Company Description Worksheet

Business Name	ReHeat
Company Mission Statement	To create a product that will help everyone who needs immediate, sustainable thermal relief, by transforming recycled materials into high-performance instant heat solutions that protect both people and the planet through circular design.
Company Philosophy/ Values	We focus on improving the accessibility of instant heat by combining practical innovation, high-quality manufacturing, and sustainable materials.
Company Vision	To deliver clean, instant thermal solutions to everyone, ensuring that everyday innovation always leaves a positive footprint.
Goals and Milestones	Long-Term Objectives a. To become the go-to standard for instant thermal relief, establishing a trusted brand known for premium quality and environmental integrity. b. To expand our market with strategic partnerships with eco-conscious distributors to bring accessible instant heat to communities worldwide. Short-Term Objectives a. To maximize the chemical efficiency of our solution to guarantee fast, safe, and long-lasting instant heat. b. To launch an engaging and visual social media plan that showcases the "click" activation and explains how easily the product is reused. c. To engineer a durable, safe, and minimalist protective casing for the device using 100% upcycled or recycled materials.
Target Market	Our market targets anyone in need of instant, portable thermal relief—ranging from individuals seeking pain relief to outdoor enthusiasts in cold environments—who demand a high-performance alternative to single-use products.
Industry/ Competitors	The thermal relief market is heavily flooded with disposable heating packs, making them the most widely available option. However, high-quality reusable alternatives are often expensive, imported, and hard to find locally. On top of that, the vast majority of these commercial packs are made from non-recyclable materials and chemical elements that end up directly in landfills, causing severe long-term accumulation and ecosystem damage. Most portable heat products on the market are cheap, disposable packs that are used once and thrown away. Reusable options do exist, but they tend to be more expensive and harder to find, especially locally. This leaves many people relying on low-quality products that create unnecessary plastic waste. The outlook for this industry is incredibly promising, as both the wellness and outdoor markets are expanding by billions of dollars every year. This growth is being driven by a real demand for tech that actually respects the environment. Because people are actively

	looking for smarter, reusable alternatives, our business enters the market with a good competitive advantage Direct competitors: Nexcare (3m), Body care. San Up (electric), thermoskin

1.7. Estructura Jurídica

ReHeat se constituirá como una Sociedad de Responsabilidad Limitada (S.R.L.). Se eligió esta forma porque la responsabilidad de cada socio queda limitada al valor de su aporte y porque es una estructura adecuada para una empresa pequeña que recién empieza. El capital social planificado es de Gs. 110.000.000 y estará integrado por los cinco miembros del proyecto.

El capital será aportado en partes iguales: Sofia Holsbach, Giuliano Casati, Stephanie Durand, Isabella Andrada y Antonella Levin aportarán Gs. 22.000.000 cada uno. Para este proyecto se considera que el capital será 100% propio y se utilizará para activos fijos, gastos de apertura, producción inicial, recursos humanos, gastos operativos y una reserva para imprevistos.

Socio	Aporte previsto

Isabella Andrada	Gs. 22.000.000
Antonella Levin	Gs. 22.000.000
Total capital social	Gs. 110.000.000

Products & Services Description

Business Name	ReHeat
Product Idea	ReHeat is a reusable, click-activated thermal pad designed for everyday pain relief — stomach and belly aches, sports and muscle soreness, and general aches from work or daily activity. Each pad is filled with a sodium acetate solution and a small metal disc; flexing the disc triggers instant crystallization, which releases heat within seconds. Once used, the pad is reset simply by boiling it in water for a few minutes, allowing it to be reused hundreds of times. The pouch is made from a durable, food-safe flexible film, and the product is wrapped in a soft, washable fabric sleeve in natural, earthy tones (leaf green, warm beige, sky blue) rather than the clinical white or plastic look of most heat-therapy products on the market. Because it requires no electricity, batteries, or single-use chemical packets, ReHeat is positioned as a sustainable, drug-free alternative to disposable heat patches.
Special Benefits	Across Paraguay and the wider region, home heat therapy is already a deeply familiar remedy — many households reach for a hot water bottle ("bolsa de agua caliente") or a heated cloth to ease menstrual cramps, stomach pain, or sore muscles long before turning to

	medication. ReHeatmodernizes that same trusted home remedy: instead of boiling water each time and risking spills or slow, uneven heat, the user gets the same warmth instantly and safely, in a pad shaped to sit comfortably against the body. The sodium acetate technology inside ReHeat is not new chemistry — it is the same reliable, self-regulating reaction used in commercial hand warmers for decades — but applying it to a general, reusable pain-relief pad in a market still dominated by imported disposable patches gives ReHeat a genuine local opportunity. Every ReHeat pad reused instead of thrown away also directly reduces the small but steady stream of single-use plastic and adhesive waste that disposable heat wraps generate with every single use.
Unique Features	ReHeat's main differentiator is combining three things competitors rarely offer together: instant, reusable heat (unlike slower microwave or single-use products), a natural and calming visual identity built around the earthy color palette our own market survey found builds the most customer trust, and an accessible local price point designed specifically around what our surveyed target customers said they were willing to pay. Unlike larger international competitors, ReHeat is also positioned to build a direct, personal relationship with its customers through local social media (Instagram) and community-based selling rather than large-scale anonymous retail, which allows the brand to respond quickly to customer feedback and build trust the way a new, small business can.
Limits and Liabilities	As a new brand, ReHeat has no purchase history, reviews, or long-term durability data to point to yet, unlike established competitors that have been selling similar products for over twenty years — this is the single biggest early hurdle to earning customer trust. Because the pad involves heat applied directly to the skin, there is a real liability risk if a unit is damaged, overheated, or used incorrectly; clear safety instructions, temperature testing, and quality control during manufacturing are essential, and product liability insurance should be budgeted for from the start. Sourcing consistent, high-quality raw materials (the sodium acetate solution and durable pouch film) at a small starting volume may also be more expensive per unit than it will be once production scales up, which will affect early profit margins.
Production and Delivery	Initial production is planned as small-batch assembly in a rented workshop space in the Asunción metro area, where the sodium acetate solution is measured and sealed into pre-formed pouches, the metal click-discs are inserted, and each unit is heat-tested before being packaged in its fabric sleeve. As demand grows, this process can move to a larger contracted local manufacturing partner. Commercialization will run primarily through direct-to-consumer channels — Instagram and WhatsApp ordering, reflecting that 76.9% of our surveyed customers discover new products through Instagram — supported by local delivery/courier partners for home drop-off, with a longer-term goal of placing ReHeat in local pharmacies and wellness or sporting goods stores once the brand has built a track record.
Suppliers	Raw materials: a chemical supplier for food-grade sodium acetate solution (sourced regionally, likely through a Brazilian or Argentine chemical

	distributor given limited local production) and a manufacturer for the flexible, heat-safe pouch film and metal click-discs. Textiles and packaging: a local textile workshop for the fabric sleeves in ReHeat's natural color palette, and a local printer for recyclable cardboard packaging. Logistics and commercial operations: a local courier/delivery service for direct-to-consumer orders, and, longer-term, distribution agreements with pharmacies or wellness retailers. A freelance designer or small marketing partner will support the Instagram-first content strategy identified as the most effective channel in our market research.
Intellectual Property Special Permits	Trademark registration: the ReHeat name and logo would need to be registered with DINAPI (Dirección Nacional de Propiedad Intelectual), Paraguay's intellectual property authority. This requires filing through a registered industrial property agent, a public-notice period of 60 business days for third-party opposition, and grants protection for 10 years once approved. Sanitary registration: because ReHeat is a device intended for therapeutic pain relief, it would likely need to be registered with DINAVISA (DirecciónNacional de Vigilancia Sanitaria) as a low-risk (Class I) medical device before it can be legally manufactured, distributed, or sold in Paraguay. General business registration: a RUC (Registro Único de Contribuyente) for tax purposes, along with a municipal commercial operating license ("patente comercial") from the municipality where the business is based, are both required before commercial operations can begin.
Product Description	ReHeat is a reusable, click-activated heat pad built for everyday relief from stomach aches, sports-related soreness, and general muscle and joint pain. With one flex of the internal disc, the pad heats instantly and holds its warmth for an extended period; boiling it in water resets it for the next use, so a single pad can replace hundreds of disposable heat patches over its lifetime. Beyond pain relief, regular users can expect a noticeably lower reliance on single-use adhesive patches and the recurring cost that comes with repurchasing them, along with a calming, natural-feeling product designed to fit comfortably into a daily self-care routine rather than feel like a medical device. As part of its social responsibility strategy, ReHeat plans to highlight the plastic waste avoided through reuse in its marketing, and to explore partnerships with local recycling or environmental education initiatives as the brand grows — turning the product's core sustainability benefit into a visible part of the brand's community presence, not just a footnote on the packaging.

CIRCULAR ECONOMY

FACTORS AFFECTING SUPPLY AND DEMAND

Marketing Plan

Barriers to entry

One of the biggest problems ReHeat could have when entering the market is that we are a new company, so people still do not know our brand or trust it. Companies like Punto Farma, Profit, and Farmaoliva have already been in the market for years and have many customers. Some of them also have stores in many places, while ReHeat will start mainly with online sales and partnerships. Another challenge is making people understand that even though we use recycled materials, the product is still safe, clean, and good quality. We will also have to test the heat pads properly and follow the safety rules before selling them. Since bigger companies have more money for advertising, we will need to be creative and use social media, product demonstrations, and partnerships to make people notice ReHeat.

Threats and opportunities

ReHeat has some threats, but it also has good opportunities. A big threat is competing against companies that people already know and trust, like Punto Farma and Profit. Some customers may prefer buying from these brands because they have more experience and are easier to find. Another problem is that some people may not understand how the click heat pad works or may think recycled materials are not as good. On the other hand, ReHeat has the opportunity to be different because our product is reusable, portable, easy to activate, and better for the environment. Our price of Gs. 50,000 is also competitive compared to similar products. Social media can help us a lot because we can post videos showing how the product works and reaches many young people without spending too much money. Working with pharmacies, gyms, and physiotherapy clinics could also help more people discover and trust ReHeat.

SWOT Analysis Worksheet

	STRENGTHS	WEAKNESSES	OPPORTUNITIES	THREATS
Product Offering	Eco-friendly reusable heat pads made from recycled materials.	Limited variety of products.	Can create more with different sizes and designs.	Customers may prefer well-known brands.
Brand / Marketing	Easy to promote through social media.	Small marketing budget.	Promote through Instagram, TikTok, etc.	Low customer interest in a new product.
Staff / HR	Good teamwork and	Not that much experience in	Gain experience for future projects.	Team conflicts or lack of

	communication.	running a business.		availability.
Finance	You don't need to spend a lot of money to get started.	Not having cash ready when you need to buy stock.	Adding different payment options so people buy faster.	Inflation, increase material prices.
Operations / Management	You can run everything from your phone.	Our shipping can be slow, you rely on just one supplier, and you run out of time to do it all alone.	Using apps to ship orders automatically.	Website platforms suddenly changing their rules.
Market	You can talk directly to buyers on social media.	Ads cost too much money, it is hard to get free views.	Texting old customers to buy again for free.	Social media ads getting more expensive.
Can any of your strengths help with improving your weaknesses or combating your threats? If so, please describe how below. **Yes, our eco-friendly product helps us stand out from competitors, while our low production costs allow us to keep prices affordable. Good teamwork also helps us overcome challenges by sharing tasks, solving problems together, and promoting our product more effectively.**				
Based on the information above, what are your immediate goals/next steps? **Our immediate goals are to organize our group, collect recycled materials from restaurants and companies, and start trying to make heat pads. We will also test different versions to make sure they are safe and effective.**				
Based on the information above, what are your long-term goals/next steps? **Our long-term goals are to improve the design of our heat pads by testing and refining them over time, making sure they are safe, effective, and eco-friendly. In the end, we want to demonstrate good teamwork, creativity, and a strong understanding of how a sustainable product can be developed.**				

Product/Service features and benefits.

ReHeat is a reusable heat pad that gives heat with just one click. It uses sodium acetate to heat up, so you do not need to plug it into anything while using it. After it gets cold, you can put it in boiling water for around two minutes and use it again. It can help with muscle pain, cramps, back pain, or even just when someone feels cold. It is also easy to carry around and can be used in different places. Another good thing about ReHeat is that we use recycled and reused materials, so it is also better for the environment.

Target customer

Our target customers are mostly people who want a simple way to feel better when they have pain or need heat. This can be students, athletes, people who go to the gym, people who work a lot, or people who usually get cramps or muscle pain. We also want to reach

younger people because they use social media a lot and are more open to trying new products. ReHeat is for people who want something easy to use, reusable, and not too expensive.

For consumers

For normal customers, ReHeat can be useful in everyday life. They can use it at home, after sports, while studying, or when they have cramps or body pain. Since it can be reused many times, people do not have to keep buying disposable heat pads every time they need one. This can help save money in the long term. It is also practical because you can carry it in a bag and use it without electricity.

For businesses

ReHeat can also be useful for businesses like gyms, pharmacies, physiotherapy clinics, and wellness centers. For example, gyms and physiotherapy clinics could use or sell heat pads to people who need help with muscle pain or recovery. Pharmacies could also sell ReHeat as another option for people looking for heat therapy products. Working with these businesses could help more people see the product and also make ReHeat look more trustworthy.

Key competitors

Our main competitors are Profit from Siegen S.A., Punto Farma, and Farmaoliva. These companies already have experience and people already know them, which gives them an advantage. Profit sells reusable hot and cold gel packs, and Punto Farma and Farmaoliva sell different health and wellness products. Even though they are bigger companies, ReHeat is different because it can be activated with a click, it is reusable, portable, and it uses reused materials. Our price of Gs. 50,000 is also close to what similar products cost, so we think it can compete well in the market.

Competitor Data Collection Plan

Competitor Data Collection Plan	***Profit (Siegen S.A.)***	***Punto Farma***
Price	Their hot/cold gel packs cost around Gs. 53,000 to Gs. 59,000, depending on the size	Their similar products are a little more expensive, costing around Gs. 60,000 to more than Gs. 100,000.

Benefits/Features	Their product can be used for both hot and cold therapy. It is reusable, but it needs hot water or a microwave to heat it.	They sell different hot/cold gel products that can help with pain and muscle recovery. They are reusable too, but they do not have the click activation that ReHeat has.
Size/profitability	Profit has been in the market for many years and is already known for medical, sports, and orthopedic products.	Punto Farma is a very big pharmacy company in Paraguay and has more than 700 stores, so a lot of people already know and trust the brand.
Market strategy	They focus mostly on health, sports, and recovery products. They sell through their website and also through pharmacies.	They use many ways to sell, like physical stores, social media, WhatsApp, an app, discounts, and promotions.

Competitive Analysis Worksheet

Factor	REHEAT	Profit (Siegen S.A.)	Punto Farma	Sumed (Farmaoliva)	Importance to Customer (1-5)
Products	A reusable, click-activated sodium acetate heat pack made from upcycled materials — even the metal activator disc is a repurposed part.	Over 3,000 products, mostly orthopedic supplies, burn care, and sports/rehab equipment. Nothing like a reusable heat pack in their lineup.	Standard pharmacy shelf — medications, cosmetics, baby care, hygiene, sports nutrition. No thermal-therapy product at all.	Same story — meds, beauty, baby, personal care. No reusable or sustainable heat pack.	1
Price	Meant to be a one-time buy that saves money over disposable packs long-term, but the group hasn't locked in an exact price yet.	Mid-range. A few sample products online run roughly Gs 200,000-300,000.	Prices swing from cheap generics to pricier wellness items — they cover the whole spectrum since they're a mass chain.	Pushes daily online discounts, so prices are competitive but promotion-driven.	1
Quality	The chemistry is simple and well documented — vinegar + baking soda makes food-grade sodium acetate — and it's sealed in a pouch built to survive repeated heat/cool cycles.	ISO 9001:2015 certified across import, production, sale, and distribution. That certification does a lot of work for their credibility.	Quality you'd expect from a big chain, but they're a general retailer, not a product developer.	Pharmacy technicians run the show, and they operate under a written code of ethics.	2
Service	Everything happens online — e-commerce site, Instagram Shop, plus influencer content explaining how the product works.	Has an online store with a big catalog, but not much in-person service since they're not a walk-in pharmacy.	App ordering, WhatsApp support, multiple payment methods, even a barcode scanner for product info in-store.	Online store plus actual pharmacists you can talk to in person.	2
Reliability	No sales history yet — it's brand new — but the	Family business since 2005, and the ISO	Biggest pharmacy chain in the country, running	27 years in the market, ~600 employees, and	1

	underlying science (sodium acetate as a phase-change material) isn't new at all.	certification backs up their consistency.	since 2001, 700+ branches, all company-owned (no franchises).	supplier relationships that have clearly held up over time.	
Stability	No profit or sales yet — it's still finding its footing.	Solid, spread across health, orthopedics, and sports categories.	Extremely stable at this scale — 700+ branches in 135 towns don't happen without staying in power.	About 150 branches and almost three decades running — stable, if smaller than Punto Farma.	1
Expertise	The team understands the sodium acetate reaction and sourcing sustainable materials, but none of us have run a retail business before.	Good at medical/orthopedic/sports products, not at thermal therapy specifically.	Knows pharmacy logistics inside and out, but reusable heat packs aren't their specialty either.	Same — experienced pharmacy staff, but not specialists in sustainable thermal products.	2
Company Reputation	Basically, unknown right now — reputation has to be built from zero.	Known as a leader in orthopedic and medical supplies.	Huge brand recognition — hard to miss anywhere in the country.	Respected, especially given how long they've been around.	2
Location	No physical store — online only, so no walk-in option.	Mostly sell through their own online store, not branches.	700+ branches in 135 localities, some open 24 hours. Hard to beat.	About 150 branches — smaller footprint, still national.	3
Sales Method	Direct through the website and Instagram Shop only.	Their own e-commerce platform (store.siegensa.com), no physical network.	Branches, app, and WhatsApp orders all at once.	Branches plus an online catalog.	3
Advertising	Wellness/self-care influencers on Instagram, Facebook, TikTok, plus a blog.	Website and catalog, leaning into health and sports performance branding.	Big social media presence and constant proms.	About 72K Instagram followers, active promotions, leans on their long history.	4

Positioning/Niche

Our niche is people who are looking for a practical and affordable way to relieve muscle pain, cramps, headaches, etc. While also caring about the environment. ReHeat is positioned as an eco-friendly alternative to traditional heating pads because it uses recycled materials that would otherwise become waste. Our brand focuses on sustainability, creativity, and social responsibility, showing that waste can be transformed into something useful.

Advertising

For paid advertising, we're keeping things focused instead of trying to be everywhere at once. Online is our main channel, specifically Instagram and Facebook ads, since that's where most of our target audience (roughly 18–35-year-olds who care about sustainability and/or deal with muscle pain from sports, work, or long days sitting down) actually spends time, and it fits a small-business budget a lot better than most other options. We'd run this harder during the colder months, May through August here, when demand for heat therapy naturally goes up, and again around exam periods when everyone is tense and stressed.

We're not planning to use radio or cable television. Both are expensive for the reach they'd realistically give us at this stage, and they're not really where our audience is anyway. Print and out-of-home advertising will stay small and targeted rather than mass-market: flyers and small countertop displays placed directly in the pharmacies, gyms, and physiotherapy clinics we partner with, so people see the pad right where they'd actually be thinking about buying one. That reaches people at the exact moment they're deciding, for a fraction of what a billboard would cost.

Our main channel is Instagram and Facebook, posting three or four times a week, mostly short videos of the pad being clicked and heating up, since watching it crystallize sells it better than anything we could write. We'd pay for ads mainly during the cold months May–August and around exam season and keep the spend low the rest of the year.

We'd also have a simple website with product info, safety instructions, and ordering, plus SEO (Search Engine Optimization) for searches like "compresa caliente reutilizable Paraguay."

For print, flyers and small countertop displays in the pharmacies, gyms, and physio clinics we partner with cheap, and they reach people right when they're deciding what to buy.

Word of mouth matters a lot since the pad is reusable, and people keep showing it to others, so we'd add a discount. We'd also try to get free coverage from local sustainability accounts and school fairs.

No radio, TV, or billboards, too expensive for what we'd get back, and our audience isn't there.

We want to seem useful, honest, and good for the environment without being annoying about it. Being eco-friendly shouldn't mean paying more or getting something worse. People buy it because it helps with pain, and the recycled part is why they feel good about it after.

Since people put this on their skin, we need them to trust us. That means being clear about how hot it gets, honest about how many times it can really be reused and giving easy instructions instead of bad talk.

We also want to feel local and cheap enough for normal people. We're not a fancy imported brand, just something made by us.

Logo: the name plus a heat wave that loops back into itself, so it shows both the heat and the fact that you can use it again. Simple enough to read on a small label or profile picture.

Colors: warm orange and terracotta as the main colors, because they make people think of heat and comfort right away. A dark green or teal for the eco side, and a cream or brown paper tone in the background.

Font: one rounded font for everything. Round letters feel soft and safe, which fits something you put on your body, and using one font makes printing cheaper.

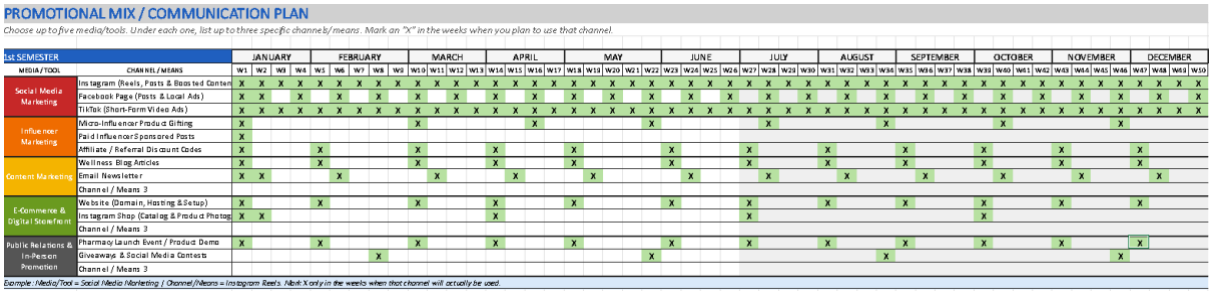

Packaging: recycled cardboard with a window so people can see and touch the pad. The instructions for resetting it go printed inside the sleeve, so the box is still useful. The rough paper already feels recycled, which works better than just writing "eco-friendly" on it.

In stores: small counter displays with a demo pad, people can click themselves. That's probably the best-selling tool we have.

Social media: real photos instead of stock ones the pad being used, close ups of the crystals spreading, and the recycled material before and after. Keeping it consistent makes people recognize us while scrolling.

Promotional budget

How much do you plan to spend on the marketing and advertising outreach above:

PROMOTIONAL MIX / COMMUNICATION PLAN

Choose up to five media/tools. Under each one, list up to three specific channels/means. Mark an "X" in the weeks when you plan to use that channel.

BUDGET SUMMARY	
Before-Startup Promotional Cost	Gs. 2,360,000
Monthly Ongoing Promotional Cost	Gs. 1,042,650
Annual Ongoing Promotional Cost	Gs. 12,511,800
Estimated First-Year Promotional Cost	Gs. 14,871,800

- Before startup (These numbers will go into your startup budget)

  Before launching, we plan to spend about Gs. 2,360,000 on marketing. This includes social media posts, blogs, emails, Google and Meta ads, and promoting the launch. Since ReHeat is a new brand, we need to spend some money at the beginning so people can discover the product and understand how it works.

- On an ongoing basis (These numbers will go into your operating plan budget)

  After launching, we'll spend around Gs. 1,042,650 per month on marketing and advertising. This will include social media ads, website costs, and product demonstrations. In one year, this will be about Gs. 12,511,800. We think this budget will help us keep promoting ReHeat and stay active on social media without spending too much. And the estimated promotional cost is Gs. 14,871,800. This includes the Gs. 2,360,000 we plan to spend before startup and around Gs. 12,511,800 for ongoing marketing during the year.

Use the Marketing Expenses Strategy Chart on the next page to help figure out the cost of reaching different target markets.

Marketing Expenses Strategy Chart

	Target Market 1	Target Market 2	Target Market 3
One-Time Expenses	Gs. 1,450,000 for the website, product photos, an influencer, and the launch on social media.	Gs. 500,000 for flyers, small displays, and materials to show ReHeat in pharmacies.	Gs. 410,000 for samples, demonstrations, and promotional materials.
Monthly or Annual Expenses	Gs. 600,000 per month mostly for Instagram, TikTok, Facebook ads, influencers, and giveaways.	Gs. 250,000 per month for promotions, demo days, and materials in pharmacies.	Gs. 192,650 per month for samples, demos, and promotion in gyms and clinics.
Labor Costs	No extra cost at the beginning because our group can manage the social media and content.	No extra cost at the beginning because we can contact and visit pharmacies ourselves.	No extra cost at the beginning because we can organize the demos and partnerships ourselves.

Pricing Strategies

Name of the company	ReHeat	
Which of the pricing strategies are you using?		
Skimming	**Value Based**	**Cost - Plus**
We chose Cost-Price because that is how we calculated our cost of production. We started from calculating how much it costs us to make one unit of our product (Gs.14,080) and then added a margin on top to land on our selling price of Gs. 50,000. That's a **Gs. 35,920** markup per unit, about a **255%** margin over our production cost. We didn't start from a competitor's price or from what we thought customers would be willing to pay and work backward — we started from our own cost sheet and built up from there, which is what makes this Cost-Plus rather than Value-Based or Skimming. This approach made sense for us because, as a brand-new business, we don't have real sales data yet to know exactly what the market will be, but we do have solid numbers on what our ingredients and packaging cost. Cost-Plus gave us a straightforward, defensible way to make sure every unit we sell covers its own production cost and still contributes a healthy margin, instead of guessing at a price and hoping it covers our costs after the fact. At Gs.50,000, we are priced below our competitor **"Punto Farma"** and close to our other competitor **"Profit (Siegen S.A.)"** (~Gs. 53,000-59,000), so the margin we landed on by simply covering cost plus a markup still puts us in a reasonable spot competitively — but that was a byproduct of the method, not the starting point.		

Distribution Channel Assessment Worksheet

	Distribution Channel 1 Online Sales	**Distribution Channel 2 Pharmacies**	**Distribution Channel 3 Gyms and Physiotherapy Clinics**
Ease of Entry	Easy to start because we can sell through our website and social media without needing a physical store.	Medium difficulty because we need to contact pharmacies and convince them to sell our product.	Medium difficulty because we need to make agreements with gyms and clinics first.
Geographic Proximity	Very good because we can reach people from different areas through online orders and delivery.	Good because pharmacies are located in many places and customers already visit them.	Good, especially in places where people exercise or go for muscle recovery.

Costs	Lower cost because we do not need to pay for a store, but we still have delivery and website orders.	Higher cost because we may need displays, packaging, and possibly give part of the sale to the pharmacy.	Medium cost because we may need samples, demos, and promotional materials.
Competitors' Positions	Competitors also sell online, so we would need strong social media and good content to stand out.	Competitors are already strong in pharmacies, especially brands sold by large chains.	There may be less direct competition, which gives ReHeat a better chance to stand out.
Management Experience	We do not have much business experience yet, but online selling is easier for us to manage at the beginning.	We would need to learn how to work with larger businesses and manage orders properly.	We can manage small partnerships more easily and learn as the business grows.
Staffing Capabilities	Our group can manage social media, orders, and customer messages at first.	We may need more people later if we start working with many pharmacies.	Our team can handle meetings, demos, and partnerships at the beginning.
Marketing Needs	We need strong Instagram, TikTok, and Facebook content to reach people and show how ReHeat works.	We need flyers, small displays, and product demonstrations so customers notice ReHeat in the pharmacy.	We need samples, demonstrations, and partnerships with trainers or physiotherapists to recommend the product.

3.13. Pronóstico de Venta de 12 meses / 12-month sales forecast

Para la proyección de ventas se tomó como base un precio de Gs. 50.000 por unidad. Se estima comenzar con 1.200 unidades en enero y aumentar aproximadamente 15 unidades por mes. Con esta proyección, durante el primer año se venderían 15.390 heat pads y se generarían ventas estimadas de Gs. 769.500.000.

Mes	Unidades	Precio por unidad	Venta estimada
Enero	1.200	Gs. 50.000	Gs. 60.000.000
Febrero	1.215	Gs. 50.000	Gs. 60.750.000
Marzo	1.230	Gs. 50.000	Gs. 61.500.000
Abril	1.245	Gs. 50.000	Gs. 62.250.000
Mayo	1.260	Gs. 50.000	Gs. 63.000.000
Junio	1.275	Gs. 50.000	Gs. 63.750.000
Julio	1.290	Gs. 50.000	Gs. 64.500.000
Agosto	1.305	Gs. 50.000	Gs. 65.250.000

Setiembre	1.320	Gs. 50.000	Gs. 66.000.000
Octubre	1.335	Gs. 50.000	Gs. 66.750.000
Noviembre	1.350	Gs. 50.000	Gs. 67.500.000
Diciembre	1.365	Gs. 50.000	Gs. 68.250.000
TOTAL	15.390	-	Gs. 769.500.000

Plan Operativo

- Producción

Los heat pads de ReHeat serán producidos utilizando materiales como vinagre, bicarbonato de sodio, plástico y un disco activador de metal. Fue calculado que el costo aproximado de producción será de Gs. 14.080 por unidad. Cada mes serán producidas las unidades necesarias para cubrir las ventas esperadas y también será guardada una pequeña cantidad extra por si la demanda aumenta. Antes de ser vendidos, los productos serán llenados, sellados y revisados para asegurarse de que funcionen correctamente.

- Control de calidad

El control de calidad será considerado una parte muy importante del negocio, ya que el producto será colocado directamente sobre el cuerpo. Cada heat pad será revisado antes de ser vendido. Se comprobará que el producto esté bien sellado, que no tenga pérdidas y que el disco de activación funcione correctamente. También será controlada la temperatura para que el producto pueda ser usado de forma segura.

- Ubicación

Será utilizado un local alquilado para realizar la producción, guardar los materiales y organizar las actividades de ReHeat. En el presupuesto STEM fue incluido un costo aproximado de Gs. 1.500.000 por mes en alquiler. No será necesario contar con un local comercial muy grande, porque muchas de las ventas podrán ser realizadas de forma online.

- **4.4. Entorno jurídico**

ReHeat será formalizada como una S.R.L. Antes de operar se deberán realizar los trámites básicos de apertura: constitución por escritura pública, integración del capital, inscripción en los registros correspondientes, obtención del RUC ante la DNIT, matrícula de comerciante, rúbrica de libros contables, inscripción municipal y patente comercial, inscripción patronal en IPS y MTESS, y registro de la marca ante DINAPI. También deberán gestionarse los permisos sanitarios y de seguridad que correspondan por tratarse de un producto que genera calor y se utiliza sobre el cuerpo.

Las principales obligaciones fiscales consideradas para la empresa son el IVA del 10%, el IRE del 10% sobre la utilidad antes de impuestos, el IDU cuando se distribuyan utilidades y la patente comercial municipal. Estos trámites y obligaciones serán acompañados por el contador y la asesora legal del proyecto.

- Personal

  La empresa será manejada por los cinco integrantes del grupo y a cada uno le será asignada una función diferente.

  Sofia Holsbach – CEO

  Isabella Andrada – Gerente Comercial

  Antonella Levin – Gerente de Producción

  Stephanie Durand – Gerente Administrativa

  Giuliano Casati – Gerente Financiero

  En el presupuesto STEM fue estimado un salario aproximado de Gs. 3.044.000 por persona al mes, por lo que se gastarían alrededor de Gs. 15.220.000 mensuales en los cinco salarios principales.

- **4.6. Inventario**

  El inventario será controlado para tener los materiales necesarios sin acumular demasiado stock. Se mantendrá un stock de seguridad equivalente a aproximadamente 100 unidades de producto para cubrir posibles aumentos de demanda o atrasos de proveedores. El vinagre, bicarbonato de sodio, plástico, discos metálicos y demás materiales serán guardados en un lugar limpio, seco y ordenado. El producto terminado no necesita refrigeración, pero deberá mantenerse protegido del calor excesivo, golpes y objetos que puedan dañar el empaque.

- **4.7. Proveedores**

  Los materiales serán adquiridos principalmente de proveedores y comercios locales, comparando precio, calidad y disponibilidad. También se buscarán alianzas con empresas y restaurantes que puedan entregar materiales reutilizables limpios y aptos para el proyecto. Para las compras se proyecta pagar aproximadamente 60% al contado y 40% a crédito a 30 días, lo que permite mantener un mejor flujo de efectivo sin dejar de cumplir con los proveedores.

- **4.8. Política de crédito**

  Para la proyección contable se consideró que las ventas podrán cobrarse a 30 días. Esta política permite organizar los cobros y estimar las cuentas por cobrar de cada

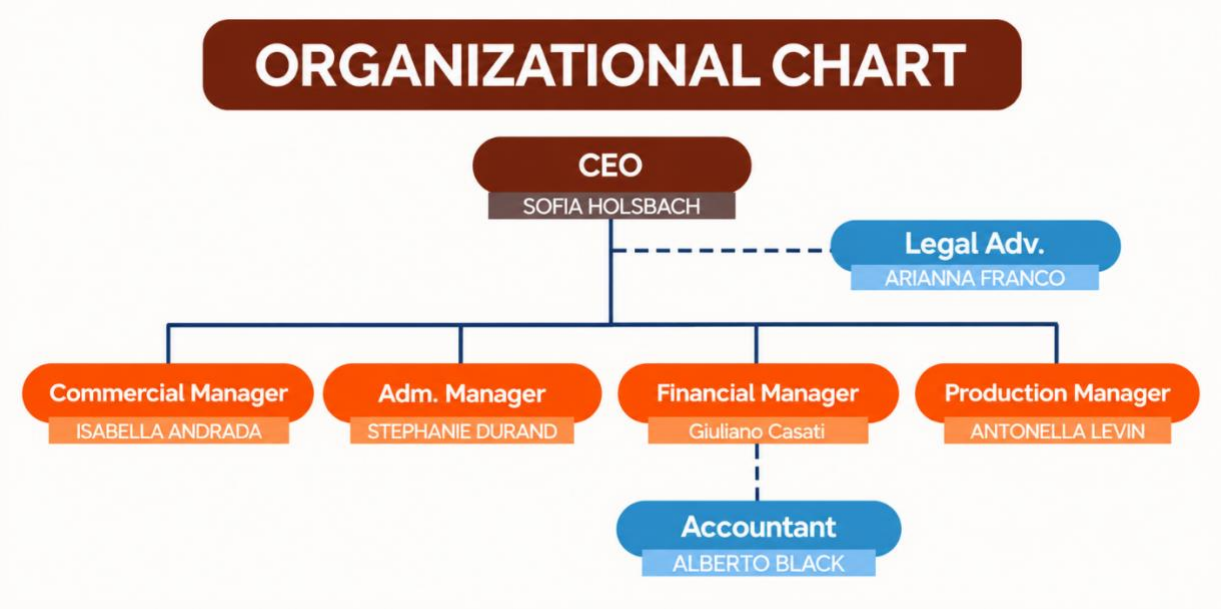

mes. En las compras a proveedores se usará una condición estimada de 60% al contado y 40% a 30 días. El gerente financiero llevará el control de las fechas de cobro y pago para evitar atrasos y mantener suficiente dinero disponible para la operación.

Management Worksheet

Create a Bio-style chart with important data for each member of the board of directors (the members of the group who will be in charge of managing the company).

Bio/s	ReHeat will be managed by five students, and a different position will be given to each member. General company decisions will be handled by Sofia Holsbach as CEO. Sales and commercial activities will be managed by Isabella Andrada. Production and product preparation will be controlled by Antonella Levin. Administrative work and documents will be handled by Stephanie Durand. Finally, financial information, costs, budgets, and sales forecasts will be managed by Giuliano Casati.
Gaps in Management or Experience	Some gaps in experience are expected because the company will be managed by students and this would be the first real business managed by the group. We have not gained much professional experience yet in areas like accounting, taxes, legal requirements, and managing a company. Because of this, some help from professionals will be needed, especially for the more complicated parts of the business.
Advisors	Professional advice will be received to help the company in areas where more experience is needed. According to the STEM budget, Alberto Black will be used as the accountant, while Arianna Franco will be used as the legal advisor. Financial records, taxes, salaries, and accounting will be supported by the accountant. Legal documents, permits, company registration, and contracts will be supported by the legal advisor. Around Gs. 800,000 per month for each advisor has been estimated in the budget.

Organization Chart

Gastos Iniciales y Capitalización

- **6.1. Gastos de puesta en marcha**

Para poner en marcha ReHeat se necesitará invertir en activos fijos, producción inicial, recursos humanos, gastos de apertura, administración y promoción. El presupuesto del proyecto determina un capital inicial de Gs. 110.000.000. De ese monto, Gs. 101.029.700 ya tienen un destino estimado y el resto queda como margen de seguridad y capital disponible para los primeros meses de operación. Dentro de los gastos de apertura se incluyen la escribanía, impuestos, tasas y gestión de inscripción. La promoción inicial de marketing se mantiene en Gs. 2.360.000 según el plan promocional.

Concepto	Monto estimado
Activo fijo	Gs. 37.325.538
Producción inicial	Gs. 18.304.000
Gastos administrativos	Gs. 8.097.900
Gastos comerciales	Gs. 13.200.000
Gastos de apertura	Gs. 3.573.700
Recursos humanos	Gs. 16.820.000
Caja chica	Gs. 1.000.000
Imprevistos	Gs. 2.708.562
Total destinado	Gs. 101.029.700
Capital planificado	Gs. 110.000.000

- Balance del día de apertura

Al iniciar operaciones, ReHeat contará con el capital aportado por los socios, los activos fijos adquiridos, los materiales para la primera producción, la caja disponible y los gastos de

apertura ya realizados. Este balance inicial permitirá identificar claramente con qué recursos comienza la empresa y cuánto capital fue utilizado antes de realizar la primera venta.

- Estado financiero personal

El proyecto será financiado 100% con aportes propios de los cinco socios. Cada integrante aportará Gs. 22.000.000, completando un capital social de Gs. 110.000.000. No se considera financiamiento bancario en la etapa inicial. El objetivo es comenzar con una estructura simple y evitar deudas innecesarias mientras se comprueba el comportamiento real de las ventas.

6.2. Estructura de Costos y Precio Final del Producto o Servicio

Para calcular el precio se toma como costo variable de producción Gs. 14.080 por unidad. Los salarios, honorarios y otros gastos de la empresa se controlan por separado como gastos fijos u operativos. Con un precio de venta de Gs. 50.000, cada unidad deja una contribución de Gs. 35.920 para cubrir esos gastos fijos y luego generar utilidad.

Concepto	Monto
Costo variable por unidad	Gs. 14.080
Precio de venta por unidad	Gs. 50.000
Contribución por unidad	Gs. 35.920
Gastos fijos mensuales estimados	Gs. 28.126.940
Punto de equilibrio	783 unidades aprox.

6.3. Uso del Capital

El capital será utilizado primero para comprar los activos y materiales indispensables, cubrir la formalización de la empresa y sostener los gastos de los primeros meses. También se reservará una parte como caja disponible e imprevistos para que la producción no se detenga si aparece un gasto no previsto.

Plan Financiero

7.1. Proyección de pérdidas y ganancias

La proyección de pérdidas y ganancias muestra el resultado económico que podría obtener ReHeat durante el primer año. Con ventas estimadas de Gs. 769.500.000 y después de descontar el costo de ventas, los gastos operativos, el IRE y la reserva legal, la utilidad neta proyectada sería de aproximadamente Gs. 77.347.218.

Concepto	Monto anual
Ventas	Gs. 769.500.000
Costo de ventas	Gs. 202.398.625
Utilidad bruta	Gs. 567.101.375
Gastos operativos	Gs. 476.636.793
Utilidad antes de impuestos	Gs. 90.464.582
IRE (10%)	Gs. 9.046.458

Utilidad antes de reserva legal	Gs. 81.418.124
Reserva legal (5%)	Gs. 4.070.906
Utilidad neta proyectada	Gs. 77.347.218

Proyección de pérdidas y ganancias a 3 años – opcional

La proyección a tres años se considera opcional. Para evitar presentar cifras sin una base real, ReHeat tomará el primer año como referencia y actualizará esta proyección cuando existan ventas reales. Si el proyecto crece, se espera reinvertir una parte de las ganancias en materiales, producción y promoción.

7.2. Proyección de flujo de efectivo

El flujo de efectivo permite ver si la empresa tendrá dinero disponible para cumplir con sus pagos. La proyección considera el capital inicial, los cobros de ventas, los pagos a proveedores y los principales gastos mensuales. Al cierre de diciembre se proyecta una disponibilidad de Gs. 85.543.792.

Mes	Cobros	Egresos	Saldo final
Enero	Gs. 0	Gs. 90.433.998	Gs. 29.566.002
Febrero	Gs. 60.000.000	Gs. 58.211.980	Gs. 62.538.020
Marzo	Gs. 60.750.000	Gs. 57.859.980	Gs. 64.390.020
Abril	Gs. 61.500.000	Gs. 58.071.180	Gs. 65.678.820
Mayo	Gs. 62.250.000	Gs. 58.282.380	Gs. 66.967.620
Junio	Gs. 63.000.000	Gs. 58.493.580	Gs. 68.256.420
Julio	Gs. 63.750.000	Gs. 58.704.780	Gs. 69.545.220
Agosto	Gs. 64.500.000	Gs. 58.915.980	Gs. 70.834.020
Setiembre	Gs. 65.250.000	Gs. 59.127.180	Gs. 72.122.820
Octubre	Gs. 66.000.000	Gs. 59.338.380	Gs. 73.411.620
Noviembre	Gs. 66.750.000	Gs. 59.549.580	Gs. 74.700.420
Diciembre	Gs. 67.500.000	Gs. 50.206.208	Gs. 85.543.792

Estado de flujo de efectivo a 3 años – opcional

El flujo de efectivo a tres años se actualizará después del primer periodo, cuando ReHeat tenga datos reales de ventas y gastos. La prioridad será mantener siempre una reserva de efectivo para poder comprar materiales, pagar a proveedores y cubrir los gastos fijos sin interrumpir la producción.

7.3. Balance proyectado

El balance proyectado muestra cómo quedaría conformada la situación financiera de ReHeat al finalizar el primer año. El total de activos proyectado es de Gs. 208.668.232 y coincide con el total de pasivo más patrimonio neto.

ACTIVO	Monto
Disponibilidades	Gs. 85.543.792
Créditos / cuentas por cobrar	Gs. 69.750.000
Materia prima / inventario	Gs. 16.048.902

Activo fijo	Gs. 37.325.538
Cargos diferidos	Gs. 0
TOTAL ACTIVO	Gs. 208.668.232
PASIVO Y PATRIMONIO NETO	**Monto**
Proveedores	Gs. 8.203.650
IRE a pagar	Gs. 9.046.458
Capital	Gs. 110.000.000
Reservas	Gs. 4.070.906
Resultado del ejercicio	Gs. 77.347.218
TOTAL PASIVO Y PATRIMONIO NETO	Gs. 208.668.232

Cálculo del punto de equilibrio

El punto de equilibrio indica cuántas unidades deben venderse para cubrir los gastos fijos antes de empezar a generar utilidad. Con un precio de Gs. 50.000, un costo variable de Gs. 14.080 y gastos fijos mensuales de aproximadamente Gs. 28.126.940, ReHeat necesita vender cerca de 783 unidades para alcanzar el punto de equilibrio.

Dato	Valor
Precio por unidad	Gs. 50.000
Costo variable unitario	Gs. 14.080
Contribución por unidad	Gs. 35.920
Gastos fijos	Gs. 28.126.940
Punto de equilibrio	783 unidades aprox.

Uso del capital

El capital de ReHeat será utilizado principalmente para adquirir activos fijos, comprar materiales, cubrir los gastos de apertura y sostener la operación durante los primeros meses. También se mantendrá una parte disponible para caja chica, imprevistos y reposición de materiales. De esta manera, el dinero no se gastará todo al inicio y la empresa tendrá recursos para seguir funcionando mientras se cobran las ventas.

APPENDICES

Se pesaron los ingredientes necesarios para preparar la mezcla de ReHeat, asegurando que se utilizara la cantidad correcta de cada material.

Luego, los ingredientes fueron calentados y mezclados para formar la solución que posteriormente se utilizaría dentro del heat pad.
