Executive Summary

HidroShine S.R.L. is a company made by five students of San Ignacio de Loyola School in Asuncion. We make a natural cleaning spray of 300 ml that takes limescale off bathroom and kitchen surfaces, and we make it from orange and lemon peel that restaurants throw away every day.

The products people use today is made with hydrochloric acid or sodium hydroxide. Those burn the skin, hurt the eyes of the person cleaning, and then go down the drain into the water. Our spray uses citric acid from fruit peels and breaks the limescale in the same way, but without those strong chemicals. We buy the peel at a very low price because it is a waste for the restaurants. This connects our project with three Sustainable Development Goals: responsible consumption and production, clean water and sanitation, and good health and well-being.

We sell to supermarkets and stores in Asuncion, and from there our product reaches families with hard water and small businesses that clean bathrooms every day. Our competitors are *Cif, Harpic* and *Mr. Musculo.* All three come from other countries, all three are chemicals, and none of them use waste. They cost between 26 and 37 guaranies per milliliter while we cost about 57, so we are not the cheapest option. We charge more and we explain why: the Harpic label itself tells the user to wear gloves, eye protection and an apron and to wait thirty minutes.

Our market research also changed the way we sell. When we asked what would most influence the decision to try a new cleaning product, 63.5 per cent chose proof that it works, far above price. Because of this, we do not compete with discounts. We visit the stores and spray the product on a dirty shower glass in front of the buyer.

On the money side, we sell each bottle at 17,000 Gs. and each one costs us 8,205 Gs. to make, so we earn 8,795 Gs. Our fixed costs are 37,644,099 Gs. per month, so we need 4,280 bottles a month to cover them. The five partners put in 94,000,000 Gs. of capital, and we expect to sell 884,340,000 Gs. in the first year with a net profit of 34,102,914 Gs.

Resumen Ejecutivo

HidroShine S.R.L. es una empresa formada por cinco estudiantes del Colegio San Ignacio de Loyola de Asunción. Fabricamos un spray de limpieza natural de 300 ml que saca el sarro de las superficies del baño y de la cocina, y lo hacemos con cáscara de naranja y de limón que los restaurantes tiran todos los días.

Los productos que la gente usa hoy están hechos con ácido clorhídrico o hidróxido de sodio. Esos queman la piel, lastiman los ojos de la persona que limpia, y después se van por el desagüe hasta el agua. Nuestro spray usa ácido cítrico de la cáscara y rompe el sarro de la misma manera, pero sin esos químicos fuertes. Compramos la cáscara a un precio muy bajo porque para los restaurantes es un residuo. Esto conecta nuestro proyecto con tres Objetivos de Desarrollo Sostenible: producción y consumo responsable, agua limpia y saneamiento, y salud y bienestar.

Vendemos a supermercados y tiendas de Asunción, y desde ahí nuestro producto llega a familias con agua dura y a negocios pequeños que limpian baños todos los días. Nuestros competidores son Cif, Harpic y Mr Músculo. Los tres vienen de otros países, los tres son químicos y ninguno usa residuos. Ellos cuestan entre 26 y 37 guaraníes por mililitro y nosotros unos 57, así que no somos la opción más barata. Cobramos más y explicamos por qué: la etiqueta de Harpic indica usar guantes, protección ocular y delantal, y esperar treinta minutos.

La investigación de mercado también cambió nuestra forma de vender. Cuando preguntamos qué influiría más en probar un producto de limpieza nuevo, el 63,5 por ciento eligió la prueba de que funciona, muy por encima del precio. Por eso no competimos con descuentos. Visitamos las tiendas y rociamos el producto sobre un vidrio de ducha sucio delante del comprador.

Cada botella se vende a 17.000 Gs. y nos cuesta 8.205 Gs. fabricarla, así que ganamos 8.795 Gs. Nuestros costos fijos son 37.644.099 Gs. por mes, así que necesitamos 4.280 botellas por mes para cubrirlos. Los cinco socios pusieron 94.000.000 Gs. de capital, y esperamos vender 884.340.000 Gs. en el primer año con una utilidad neta de 34.102.914 Gs.

Company Description Worksheet

Business Name	HidroShine S.R.L.
Company Mission Statement	To give restaurant citrus waste a second life as a cleaning product that works, is safer for the person using it, and is gentler on our water.
Company Philosophy/ Values	We care about the people who clean every day, so we make a product that is safer to hold and to breathe. We care about the water of our city, so we do not send strong acids down the drain. And we care about our own place, because we make everything here in Asuncion with waste from our own restaurants.
Company Vision	To be the natural cleaning brand that Paraguayans know and trust, and to prove that a local product made from waste can compete with imported chemical brands.
Goals & Milestones	Short term: finish the formula, make our first batch and get HidroShine on the shelf of at least three supermarkets or stores in Asuncion during the first year, selling about 45,000 bottles. Long term: sell in more cities of Paraguay, add other natural cleaning products and work with more restaurants so we always have enough peel. Corporate social responsibility goal: we will donate 1% of our yearly net profit to Fundación Dequení, an organization based in Asuncion that works with children living in poverty, and we will run one free cleaning and hygiene workshop every year for the cleaning staff of the small businesses we sell to, where we explain how to handle cleaning products safely.
Target Market	Supermarkets and stores in Asuncion. Through them the product reaches families with hard water at home and small businesses whose staff clean the same bathrooms every day.
Industry/ Competitors	Cleaning products industry. Our direct competitors are Cif (Unilever) and Harpic (Reckitt). Our indirect competitor is

	Mr Musculo (SC Johnson). All three are imported and none of them reuse waste.
Legal Structure/ Ownership	Sociedad de Responsabilidad Limitada (S.R.L.), con un capital social de 94.000.000 Gs. dividido en 100 cuotas iguales de 188000 Gs. entre los cinco socios, donde cada uno responde solamente hasta el monto de su aporte.

Products & Services Description

Product/ Service Idea	HidroShine is a natural cleaning spray of 300 ml that takes limescale off bathroom and kitchen surfaces. The waste we use is citrus peel, mostly orange and lemon, that restaurants and juice sellers in Asuncion throw away every day. That peel goes to the rubbish and rots, even though it still has citric acid inside, and that acid is exactly what removes limescale. Our product is B2B, because we sell to supermarkets and stores, and from there it reaches the people who buy their cleaning products in those places.
Special Benefits	The main benefit is a product that takes limescale off well and is safer to use than the strong chemical products people normally buy. The environmental benefit is that we reuse citrus peel that would be thrown away, so we reduce organic waste. The social responsibility part is that our spray does not use hydrochloric acid or sodium hydroxide, so it is safer for the people who clean bathrooms every day and it sends fewer strong chemicals into the water.
Unique Features	What makes us different is that we are built around reusing waste. Instead of buying laboratory acids, we get our main ingredient from peel that was already going to the trash, and we pay a very low price for it. That makes the product eco-friendly and cheap at the same time. It is also safer than normal descalers, because it does not burn the skin or irritate the eyes. Eco-friendly, affordable, safer and socially responsible together is a mix that other cleaning products in Paraguay do not offer.

Limits and Liabilities	Natural formulas are less stable than chemical ones, so we add a cosmetic preservative and we test how long each batch keeps working. Some customers may doubt that a natural spray cleans as well as a strong chemical one, so we have to show them. We depend on restaurants for the peel, so if they give us less our production slows down. We also have to get the health and safety permits before selling, and label the product clearly.
Production and Delivery	We make the spray in a small workspace. We collect citrus peel from partner restaurants, wash and dry it, and macerate it with apple cider vinegar, cloves and the rest of the ingredients. We filter the mixture and pour it into 300 ml spray bottles. We sell only to supermarkets and stores, so customers can buy it where they already shop. Orders are arranged through WhatsApp and Instagram and delivered within Asuncion.
Suppliers	We buy the citrus peel from restaurants and juice sellers in Asuncion at a very low price, because for them it is waste they normally throw away. The vinegar, cloves and essences come from local markets and wholesale stores. The cosmetic preservative and the colorant come from a supplier of cleaning and cosmetic ingredients. The spray bottles are also bought from stores and markets.
Intellectual Property Special Permits	We need a brand name and a logo, which is HidroShine, and we plan to register them. Because it is a cleaning product used in homes and businesses, we need a health permit from DINAVISA before selling. We will register the brand with DINAPI, get an environmental permit from MADES for the production process and waste handling, and a commercial licence from the Municipality of Asuncion.
Product/ Service Description	HidroShine is a natural cleaning spray made from citrus peel, apple cider vinegar and cloves that takes limescale off bathroom and kitchen surfaces. It solves two problems at once: it gives people a cleaning product that works and is safer than harsh chemical descalers, and it reuses citrus peel that restaurants throw away every day. It is valuable because the main raw material is free, it protects the health of

	the people who clean, and it keeps organic waste out of the landfill. HidroShine joins sustainability, innovation and social responsibility by taking something people throw away and turning it into something useful.

Circular Economy

The circular economy is a way of producing in which materials do not end their life as rubbish. Instead of the straight line of take, make and throw away, the material goes back into the cycle and becomes something useful again.

We apply it at the very start of our process. Every day the restaurants and juice sellers of Asuncion peel oranges and lemons and put the peel in the bin. We buy that peel at a very low price because for them it is waste, we wash it and we dry it, and we use it as the main ingredient of our spray. We can do this because the citric acid that removes limescale is already inside the peel. In this way something that was going to the rubbish becomes a product people use every day. The circle also closes at the end, because our spray does not send strong acids into the water.

The benefits work in four directions. For the environment, we take organic waste out of the landfill, where it would rot and release gases. For the restaurants, we reduce the amount of rubbish they have to pay to have collected. For our company, the peel costs us far less than a laboratory acid would, which keeps our variable cost at 8,205 Gs. per bottle and lets us compete against much bigger brands. And for the water of our city, the circle closes again at the end, because our spray does not send hydrochloric acid or sodium hydroxide down the drain.

Marketing Plan

We surveyed 52 people with a Google Form of twelve questions. Most of them said they would change to a natural cleaning spray if it worked as well as their current product, and only a small group said they would not. When we asked about price, the largest group chose a range that sits around what we planned to charge, and very few were willing to pay much more than that. The most useful answer was about trust: proof that the product works was chosen far more than price as the reason to try a new brand, which told us to spend our effort on demonstrations and free samples instead of discounts.

We also learned that most of the people who answered do not buy cleaning products from a producer, they buy them in stores, and that is why we decided to sell through supermarkets and shops.

The first barrier is the permits. Before we can sell, we need a health permit from DINAVISA, the brand registered with DINAPI, a permit from MADES and a licence from the Municipality of Asuncion. All of that takes time and money. The second barrier is the shelf. Supermarkets ask for invoices, a minimum amount of product and a low price per bottle, and that is hard for a new company. On top of that, the best places on the shelf already belong to brands that have been there for years. The third barrier is trust, because people do not change their cleaning product easily and we have nothing to show them yet. The last barrier is our size, because we work in a small place and we cannot make a lot of bottles quickly.

Our biggest opportunity is that there is no known natural product for limescale in Paraguay. Today every option is either strong but harsh, or natural but not made for limescale, so the space we want is free. Another opportunity is that more people now look at where a product comes from, and our story is easy to tell and hard to copy. A third one is that Instagram and WhatsApp let us show the product working and they cost us almost nothing.

Our biggest threat is that the imported brands are already everywhere and people trust what they know. Another threat is that one of those companies could make its own natural product and reach the shelves before us, because they already have the space and the money. A third threat is our supply, because if the restaurants stop giving us the peel we lose our main ingredient. Our opportunity is the answer to this problem. We cannot spend more money than them, but we can be the first natural option that they do not have.

SWOT Analysis Worksheet

Business areas	**Internal factors**		**External factors**	
	Strengths	**Weaknesses**	**Opportunities**	**Threats**

Product / Service Offering	Removes limescale with citric acid from citrus peel that we buy at a very low price. The only product in our market made from organic waste.	Only one product, one size and one scent. Natural formulas are less stable than chemical ones.	No known natural limescale remover exists in Paraguay yet.	Big brands could launch their own natural line and reach the shelves faster than us.
Brand/ Marketing	A clear story that is easy to tell: the acid was already in the peel we throw away.	Nobody knows our brand yet and we have no advertising budget.	Instagram and WhatsApp let us show the product working at almost no cost.	Imported brands are already recognised and customers trust what they know.
Staff/HR	Five partners covering production, marketing, finance and sales, all involved in the project.	We are students and we have no experience running a company.	We can learn quickly and we work directly with our teachers and advisors.	If a partner leaves, a whole area of the company is left uncovered.
Finance	The peel costs us far less than a laboratory	Our fixed costs of 37,644,099 Gs. per month are	A margin of 8,795 Gs. per bottle lets us reach break-even at	If the price of bottles or preservative rises, our

	acid, so our variable cost stays at 8,205 Gs. per bottle.	high for a new company.	4,280 units a month.	margin falls quickly.
Operations/ Management	Simple production process that does not need laboratory equipment.	We produce in a small workspace, so we cannot grow the volume fast.	Restaurants sell us the peel at a very low price and are happy to reduce their waste.	If restaurants stop giving us peel, our main supply disappears.
Market	We are local and we can answer store buyers directly through WhatsApp.	We are not on any shelf yet and we depend on supermarkets accepting us.	More people in Paraguay now look at where a product comes from.	Customers may not risk changing from a brand they have used for years.

Can any of your strengths help with improving your weaknesses or combating your threats? If so, please describe how below.

Yes. Our strength is that the peel costs us very little, and our weakness is that nobody knows us. We use the low cost of the raw material to give away free samples and to run live demonstrations in the stores, which is what turns an unknown brand into a trusted one without spending on advertising.

Based on the information above, what are your immediate goals/next steps?

Our main strength is that we are the only option that removes limescale with a real acid and at the same time is made from organic waste. Our main weakness is that we are a new brand with no track record and no space on any shelf.

Based on the information above, what are your long-term goals/next steps?

Our main opportunity is that there is no known natural limescale remover in Paraguay, so the space is open. Our main threat is that the imported brands are already everywhere and customers may not want to change.

Factors affecting product supply and demand

The supply of our product depends first on the citrus peel. Restaurants sell it to us at a very low price because for them it is waste, but the amount changes with the season and with how much fruit they use, so in a slow month we get less. The second factor is how much we can make, because we work in a small place and we fill the bottles by hand. The third factor is the price of the things we buy, which are the vinegar, the cloves, the preservative, the colorant and the bottles. If one of those goes up, our cost of 8.205 Gs. per bottle goes up too. The last factor is the permits, because we cannot sell to any store until DINAVISA gives us the health permit.

The demand for our product depends on how hard the water is in each area. Where the water has more minerals, the limescale comes back faster and people buy more often. It also depends on the price, because people buy cleaning products again and again during the year, so a small difference becomes a big one. A third factor is trust, because people need to believe that a natural product really cleans. A fourth factor is where we are sold, because if we are not on the shelf where the customer shops, they simply buy another brand. Finally, demand grows as more people look at what is inside the products they use.

HidroShine is a 300 ml spray that takes limescale off taps, shower glass, tiles and other bathroom and kitchen surfaces. It has a natural formula with citric acid from citrus peel, apple cider vinegar and cloves. The spray head puts the product exactly where the limescale is, and the liquid is orange so you can see it through the plastic. For the customer, it takes off the white marks that a sponge cannot remove, it leaves fewer bacteria on the surface because of the cloves, it is safer to hold and to breathe than a chemical product, and it keeps organic waste out of the rubbish.

Families in Asuncion who have hard water at home and who see the white marks come back on their taps and shower glass every week. They buy their cleaning products in supermarkets and neighbourhood stores, and they are starting to look at what is inside the bottle they use at home.

Competitor Data Collection Plan

Supermarkets and stores in Asuncion, which are the ones we sell to directly. Behind them, small businesses whose staff clean the same bathrooms every day, such as small hotels, gyms and offices. Those are the people who feel the problem most, because they are the ones holding the bottle every shift and touching the product all the time.

Price	Cif and Harpic are sold at prices above ours. Mr Musculo sells at about 11,970 Gs. for 450 ml at Supermas. We sell at 17,000 Gs. for 300 ml.	We checked the prices on the websites of Superseis, Stock and Supermas, and by visiting supermarkets in Asuncion.
Benefits/Features	Cif offers X2 antisarro technology. Harpic offers a gel that stays longer on the surface and kills germs. Mr Musculo offers a trigger spray for general bathroom cleaning.	We read the product pages and the labels of each brand, and compared what each one promises about limescale.
Size/profitability	All three belong to large international companies, Unilever, Reckitt and SC Johnson, so they are much bigger and more profitable than us.	Company websites and the brand information printed on the packaging.
Market strategy	They sell through supermarkets and online stores with delivery. Their advertising is regional and not made for Paraguay.	We looked at where each product is sold in Asuncion and at the advertising we could find online.

Competitive Analysis

We have three main competitors and all of them come from other countries. Cif, from Unilever, is a direct competitor. It has X2 antisarro technology and a strong name, but it is one of the more expensive options. Harpic, from Reckitt, is also direct. It sells a 500 ml limescale gel at Superseis and Stock, and it also kills germs. Mr Musculo, from SC Johnson, is an indirect competitor. It costs about 11,970 Gs. for 450 ml at Supermas, but limescale is not its main promise. None of the three is made from waste, and that is the space we take.

Possitioning/Niche

HidroShine does one job. It takes limescale off. We do not sell a cleaner for everything. Our niche is the people and businesses in Asuncion who have white marks on their taps, shower glass and tiles, and who do not want to use strong chemicals. That niche is smaller than our general market, which is anyone who buys cleaning products, because it only includes the people who have limescale and who also care about what is inside the bottle.

We want customers to associate HidroShine with three things. The first is that it works on limescale, because a product that does not clean is useless even if it is natural, and our spray uses citric acid from the peel that breaks the limescale in the same way chemical products do. The second is that it is safer for the person using it, because normal products use

hydrochloric acid or sodium hydroxide that burn the skin and hurt the eyes, and we use citric acid, vinegar and cloves instead. The third is that it is made from waste that was going to be thrown away, and none of our competitors can say the same.

The gap is easy to see. The shelves in Paraguay are full of imported chemical brands and there is no known natural product for limescale. Today every option is either strong but harsh, or natural but not made for limescale. Our best advantage is that we are the only option that is both at the same time. Our main ingredient also costs us far less than a laboratory acid, because we buy a residue that the restaurant was going to throw away.

How you will market your product/service

We only advertise online. We do not use print, radio, television or street ads, because they cost more than we can pay and they do not reach our customers better than social media. Instagram is our main channel and we post three times a week, showing the product cleaning, before and after videos of shower glass and taps, and short clips about where the peel comes from. WhatsApp is our second channel and we use it every day, but to talk with the stores and not to advertise to everyone.

We want HidroShine to look local and natural. Local, because we are made in Asuncion and all our competitors come from other countries. Natural, because our cleaning power comes from fruit peel and not from a laboratory. We also want it to look serious and well made, because our price is higher than Mr Musculo and our image has to show why we cost more.

Our logo is the word HidroShine in two colours. Hidro is dark blue green, for the water that causes the problem, and Shine is orange, for the clean result. Next to the name there is a water drop in the same dark blue green with a small shine star inside it, an orange shape behind it that looks like a piece of citrus, and a green leaf on top. Under the name we put our phrase, Clean from what we throw away.

We use six colours: dark blue green, orange, leaf green, golden yellow, light beige and olive green. We use the same six on the label, on Instagram, on the website and on our flyers, so everything looks like one brand. The bottle is a 300 ml spray and the liquid inside is orange, so you can see it through the plastic and the product shows what it is made of before you read anything.

From the marketing list above we use six tools. A website with our product, our ingredients and a contact form for the stores. Instagram for social media. WhatsApp to talk to

the stores, because that is how business works in Paraguay. Print materials, which for us means our label and simple flyers we leave with the store managers. And word of mouth and referrals, because our survey showed that a recommendation from another business counts a lot. Our best tactic is not on the list: it is showing the product live. We spray it on a dirty shower glass in front of the store buyer and let them watch the limescale come off.

Promotional budget

Before starting to sell we need 4,220,000 Gs. for promotion. The biggest part is the first print run of 3,000 adhesive labels for our bottles, which costs 2,400,000 Gs. and is what turns our product into something a store can put on a shelf. After that come the flyers we leave with store managers, the 100 trial-size bottles we give to the first buyers, the demonstration kit with limescale panels and cloths, the presentation folder and sample case for sales visits, and the business cards. Almost all of this money goes into things a buyer can touch or watch, because our survey showed that people trust a cleaning product when they see proof that it works.

Our ongoing promotion costs 1,135,340 Gs. per month, which is 13,624,080 Gs. in the first year. The largest item is the in-store demonstrations at 360,000 Gs. per month, since we do four of them and each one needs transport and materials. Then come the store visits, the content we produce for Instagram posts and Reels, the free 300 ml samples we hand to store buyers, valued at our own cost of 8,205 Gs. per bottle, and the WhatsApp Business line we use to take orders. Facebook posts, emails and Instagram messages cost us nothing because we reuse the same content and use free accounts. Adding the startup and the ongoing costs, our first year of promotion comes to 17,844,080 Gs.

Marketing Expenses Strategy Chart

	Supermarkets	**Neighbourhood stores**	**Final customer**
One-Time Expenses	Labels 2,400,000 Gs. Flyers 750,000 Gs. Sample	Business cards 140,000 Gs. Trial bottles 500,000 Gs.	Demonstration kit 250,000 Gs.

	case and folder 180,000 Gs.		
Monthly or Annual Expenses	Free samples 125,340 Gs. per month. Store visits 240,000 Gs. per month.	In-store demonstrations 360,000 Gs. per month.	Instagram content 280,000 Gs. per month. WhatsApp line 130,000 Gs. per month.
Labor Costs	Sales manager, included in the fixed cost of 37,644,099 Gs. per month.	Sales manager, same person covers both channels.	Marketing manager, included in the same fixed cost.

Location

The space we need is small because we produce by hand and in batches. We need an area for washing and drying the peel, an area for the maceration in glass containers, an area for filtering and bottling, and a place to store the ingredients and the finished bottles. We do not need a large industrial building, which is why our rent is 4.000.000 Gs. per month.

Our production space is located in Asuncion, close to the restaurants that give us the citrus peel and close to the supermarkets and stores that buy from us. Being in the same city keeps our transport cost low and lets us deliver the orders ourselves.

Pricing Strategies

Name of the company	**HidroShine S.R.L.**	
Which of the pricing strategies are you using?		
Skimming	**Value Based**	**Cost - Plus**
We chose value based pricing. We are not the cheapest on the shelf, because Mr Musculo costs about 11,970 Gs. for 450 ml and we cost 17,000 Gs. for 300 ml. We ask the customer to pay a bit more and we give them a clear reason: our spray takes limescale off without putting a strong acid in the hands of the person cleaning. Our variable cost is 8,205 Gs. per bottle, so this price leaves us a margin of 8,795 Gs., which is 51.7 percent of the price, and lets us reach break-even at 4,280 units per month.		

Distribution Channel Assessment Worksheet

	Supermarket chains	**Neighbourhood stores**	**Direct sale through social media**
Ease of Entry	Hard. They ask for permits, invoices and a	Easy. A store manager can decide	Very easy. We only need our

	minimum volume we may not reach at the start.	to buy on the same visit.	Instagram account and WhatsApp.
Geographic Proximity	Good. The main chains are in Asuncion, where we produce.	Very good. They are in the same neighbourhoods we live in.	Good, but we can only deliver inside Asuncion.
Costs	Higher. They ask for a lower price per unit and pay after some weeks.	Lower. They usually pay on delivery or in a few days.	Lowest. There is no middle man, but we deliver one bottle at a time.
Competitors' Positions	All our competitors are already on these shelves and have the best positions.	Competitors are here too, but the shelf is smaller and easier to enter.	Our competitors do not sell this way in Paraguay, so the space is free.
Management Experience	None. We have never negotiated with a supermarket chain before.	Some. Our families and neighbours know how these stores work.	Good. We manage our own Instagram and WhatsApp every day.
Staffing Capabilities	We need a sales person who can visit and follow up with the buyers.	One person can cover several stores in the same trip.	One person handles messages and deliveries.
Marketing Needs	High. They will only accept us if the brand is known and the product sells.	Medium. A live demonstration is usually enough to convince the manager.	High. Everything depends on our own content and word of mouth.

Pronóstico de Venta de 12 meses/ 12-month sales forecast

Para la proyección de nuestras ventas hemos tenido en cuenta el punto de equilibrio que fue de 4280 unidades, además hemos estimado un aumento en las ventas mensuales en una escala de 10 unidades por mes y el precio estimado para la comercialización es de 17000 Gs. por unidad. Esta proyección nos sirve para conocer los posibles ingresos que tendría la comercialización de nuestro producto.

En el siguiente cuadro presentamos las ventas por el mes de Enero y total por el periodo de un año.

Presupuesto de Ventas

Plan Operativo

- Producción

Producimos en un espacio pequeño en Asunción. Recogemos la cáscara de cítricos de los restaurantes que trabajan con nosotros, la lavamos y la secamos, y la maceramos en frascos de vidrio con vinagre de manzana y clavo de olor. Después filtramos la mezcla, agregamos las esencias, el colorante, el conservante y el agua filtrada, y llenamos a mano las botellas atomizadoras de 300 ml.

- Control de calidad

Cada lote se prueba antes de salir del espacio de producción. Rociamos el producto sobre una superficie metálica con sarro, esperamos el mismo tiempo de contacto y verificamos que remueva el depósito igual que el lote anterior. También probamos el mismo lote semana tras semana para ver si cambia el olor, el color, la separación del líquido o el poder de limpieza. Así sabemos cuánto tiempo sigue funcionando el producto después de fabricado.

- Ubicación

Nuestro espacio de producción está en Asunción, cerca de los restaurantes que nos venden la cáscara y cerca de los supermercados y tiendas que nos compran. Estar en la misma ciudad mantiene bajo el costo de transporte y nos permite entregar nosotros mismos los pedidos. El espacio que necesitamos es pequeño porque producimos a mano y por lotes. Necesitamos un área para lavar y secar la cáscara, otra para la maceración en frascos de vidrio, otra para filtrar y envasar, y un lugar para guardar los insumos y las botellas terminadas.

- Entorno jurídico

Sociedad de Responsabilidad Limitada (S.R.L.), con un capital social de 94.000.000 Gs. dividido en cuotas iguales entre los cinco socios, donde cada uno responde solamente hasta el monto de su aporte.

Nuestra denominación social es HidroShine S.R.L. e incluye la sigla S.R.L. tal como lo exige la ley. Si se omitiera esa sigla, el gerente respondería de forma ilimitada y solidaria por los actos que realice en esas condiciones.

Nuestra sociedad se dedica a la elaboración y comercialización de productos de limpieza, actividad permitida para una S.R.L. Nuestro capital social de 94.000.000 Gs. está totalmente suscripto por los cinco socios y fue integrado en su totalidad al momento de la constitución.

La ley no exige un capital mínimo, pero sí que sea suficiente para cumplir el objeto social. Nuestros 94.000.000 Gs. cubren la inversión completa del primer año, que incluye el activo fijo, el costo de producción, los gastos de apertura y el capital de trabajo.

Nuestro capital fue integrado en efectivo. El activo fijo, que asciende a 25.656.000 Gs. en muebles, instalaciones, equipos informáticos y maquinarias, fue adquirido por la sociedad una vez inscripto el contrato social en el Registro Público de Comercio.

HidroShine S.R.L. podrá operar recién cuando el contrato social esté inscripto en el Registro Público de Comercio, previa protocolización.

La gestión la realiza el Escribano Público, quien presenta una nota firmada por el representante legal de la sociedad al Juez de Turno en lo Civil y Comercial.

Para formalizar la empresa tuvimos en cuenta los siguientes pasos, con la institución que interviene en cada uno y la obligación que cumplimos.

Trámites para la apertura de nuestra S.R.L.

1. Escribanía Pública. Constituimos la sociedad por escritura pública. El escribano redacta el contrato social con el nombre, el objeto, el capital, los socios y la designación del gerente.
2. Banco Nacional de Fomento. Depositamos el capital en concepto de garantía. Este depósito prueba que el capital fue realmente integrado y se libera una vez inscripta la sociedad.
3. Registro Público de Comercio y Registro de Personas Jurídicas y Asociaciones. Inscribimos el contrato social. Desde esta inscripción la sociedad existe legalmente y puede operar.
4. Publicación de la constitución de la sociedad. Publicamos un extracto del contrato social para que sea de conocimiento público, como exige la ley.
5. DNIT, Dirección Nacional de Ingresos Tributarios. Nos inscribimos para obtener el R.U.C., que es el número con el que la empresa factura y paga sus impuestos.
6. Matrícula de Comerciante. La tramitamos para quedar habilitados a ejercer el comercio de forma legal.
7. Rúbrica de los libros contables. Rubricamos los libros exigidos, entre ellos el libro diario, el libro de inventario y los libros de IVA compras y IVA ventas.
8. Municipalidad de Asunción. Nos inscribimos y solicitamos la patente comercial, que es el permiso para funcionar en el municipio donde está nuestro local.
9. I.P.S., Instituto de Previsión Social. Hicimos la inscripción patronal porque tenemos empleados en relación de dependencia y debemos aportar el 16,5% sobre sus salarios.
10. M.T.E.S.S., Ministerio de Trabajo, Empleo y Seguridad Social. Nos inscribimos como empleadores y registramos el contrato de cada trabajador.
11. D.I.N.A.P.I., Dirección Nacional de Propiedad Intelectual. Registramos la marca HidroShine y el logotipo para proteger nuestra identidad.

12. Otros organismos. También gestionamos el registro sanitario en DINAVISA, porque elaboramos un producto de limpieza, y el permiso ambiental en MADES por el proceso de producción y el manejo de residuos.

Obligaciones fiscales que asumimos

- IVA. Grava cada etapa de la comercialización hasta llegar al consumidor final, pero no sobre el total de cada venta sino sobre el valor agregado en cada etapa. Nuestro producto tributa la tasa general del 10%. Cada mes liquidamos la diferencia entre el IVA de nuestras ventas y el IVA de nuestras compras.
- IRE, Impuesto a la Renta Empresarial. Grava la ganancia obtenida por la actividad de la empresa. La tasa es del 10% sobre la utilidad antes de impuestos. En nuestra proyección del primer año pagaríamos 3.988.645 Gs. sobre una utilidad de 39.886.449 Gs.
- IDU, Impuesto a los Dividendos y Utilidades. Grava las utilidades o dividendos que se distribuyen a los socios. La tasa es del 8% para residentes en el país. Se liquida recién cuando los socios deciden repartir las ganancias.
- Patente comercial. Se abona a la Municipalidad de Asunción, donde está ubicado nuestro local. La debe pagar toda persona o empresa que ejerza una actividad lucrativa, sea industrial, comercial o profesional.

- Personal

La empresa tiene cinco socios. Rafael Chami es el Gerente General, Bruno Riveiro está a cargo de Producción, Ali Barakat de Finanzas, Alessandro Chiola de Ventas y Fabrizio Muller de Marketing. Los sueldos y las cargas sociales son la parte más grande de nuestro costo fijo de 37.644.099 Gs. por mes.

- Inventario

La materia prima que necesitamos para la elaboración de nuestro producto es de fácil adquisición y es por ello que hemos optado por mantener un stock mínimo de 10 unidades por mes. Nuestro producto no necesita de refrigeración pero si de un almacenamiento que cumpla con los estándares de higiene y salubridad.

En caso de necesitar un tipo de refrigeración entonces aclaramos que necesitamos mantener los ingredientes o productos refrigerados a x temperatura hasta su comercialización.

Teniendo en cuenta que la materia prima posee buena disponibilidad y siendo un producto orgánico o natural o sin químicos hemos planificado una producción mensual de tal forma a no necesitar contar con un stock de materia prima muy alto. Nuestro producto una vez listo tendrá un vencimiento de x tiempo. En el siguiente cuadro proyectamos las compras de materia prima por el periodo de 1 año.

- Proveedores

Compramos la cáscara de cítricos a restaurantes y jugueras de Asunción a un precio muy bajo, porque para ellos es un residuo. El vinagre, el clavo de olor y las esencias los compramos en mercados locales y en tiendas mayoristas. El conservante y el colorante vienen de un proveedor de insumos de limpieza y cosmética, y las botellas atomizadoras las compramos en tiendas y mercados.

- Política de crédito

Hemos proyectado que la totalidad de nuestras ventas iniciales sean al contado, para asegurar la liquidez y el capital de trabajo de la empresa durante el primer año. Sin embargo, con el fin de incentivar el volumen de compra y construir relaciones comerciales duraderas con los comercios, estaremos dispuestos a otorgar financiamiento bajo las siguientes modalidades:

Ventas al contado (100%). Aplicable a las tiendas de barrio, los minimarkets y las primeras transacciones con cualquier cliente nuevo. Es nuestra modalidad principal y la que sostiene el flujo de caja del primer año.

Crédito comercial B2B (30 días). Otorgado a cadenas de supermercados y distribuidores aliados, previo análisis de su perfil comercial, bajo la modalidad de abonar el 50% al contado al momento de la entrega de los lotes y el 50% restante a 30 días de plazo.

Del lado de nuestras compras la condición es inversa. Pagamos a los proveedores el 60% al contado en el mes de la compra y el 40% a 30 días, lo que nos permite cobrar antes de pagar y sostener el capital de trabajo mientras la empresa crece.

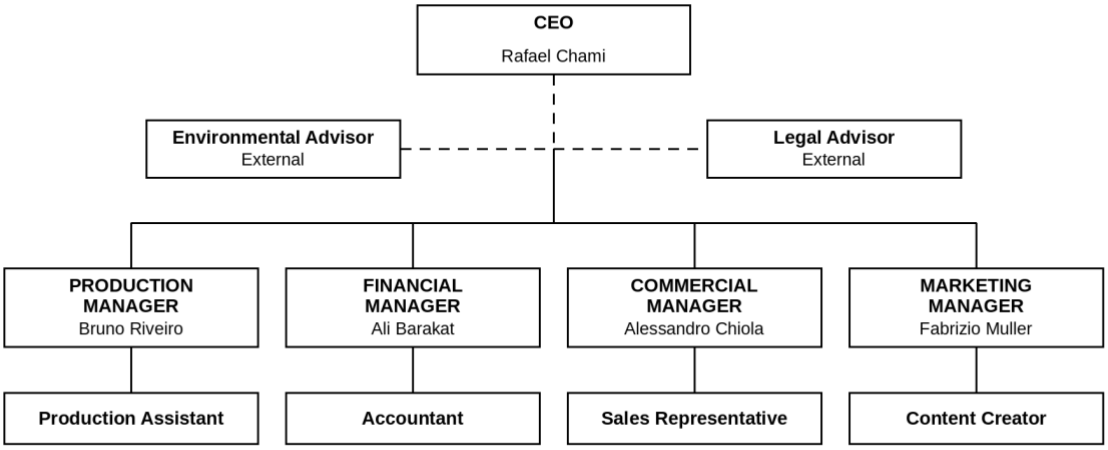

Management Worksheet

Bio/s	Rafael Chami, General Manager. Coordinates the whole project and represents the company. Bruno Riveiro, Production Manager. In charge of collecting the peel, preparing the formula and bottling. Fabrizio Muller, Marketing Manager. In charge of Instagram, the content and the brand. Ali Barakat, Finance Manager. In charge of costs, the budget and the cash flow. Alessandro Chiola, Sales Manager. In charge of visiting supermarkets and stores and closing orders.
Gaps in Management or Experience	We are students and none of us has run a company before. We have no experience negotiating with supermarket chains, and we have no formal training in chemistry or accounting. We cover this by working closely with our teachers and by checking our formula and our numbers with them before taking a decision.
Advisors	Our teachers at San Ignacio de Loyola School act as our advisors in science, marketing, accounting and language. We also plan to ask a professional in cleaning products for advice on the health permit from DINAVISA.

Organization Chart

The General Manager is Rafael Chami and he coordinates the whole company. Four areas report to him: Production, led by Bruno Riveiro; Finance, led by Ali Barakat; Sales, led by Alessandro Chiola; and Marketing, led by Fabrizio Muller. Two external advisors support the CEO, an environmental advisor and a legal advisor, but they do not give orders to the managers. Because we are a small company, each partner also helps in the other areas when it is needed.

ORGANIZATIONAL CHART

Dashed lines: external advisors that support the CEO but do not give orders to the managers.

OBJ

Gastos Iniciales y Capitalización

- Gastos de puesta en marcha

Nuestra inversión total es de 94.000.000 Gs., que es la misma cifra que nuestro capital. Cubre el activo fijo de 25.656.000 Gs. en muebles, instalaciones, equipos informáticos y maquinarias; el costo de producción de 21.258.876 Gs.; los gastos de apertura de 3.151.000 Gs.; los gastos administrativos de 10.131.819 Gs.; los gastos comerciales de 1.500.000 Gs.; el costo de recursos humanos de 26.012.280 Gs.; la caja chica de 500.000 Gs.; y 5.790.025 Gs. reservados para imprevistos.

- Balance del día de apertura

El día de la apertura la empresa cuenta con 94.000.000 Gs. de capital, aportados por los cinco socios en partes iguales. Ese dinero cubre toda la inversión sin necesidad de pedir un préstamo, y la parte que no se gasta queda como fondo de imprevistos.

Plan Financiero

- Proyección de pérdidas y ganancias a 12 meses

Según los datos de nuestro proyecto, en el primer año tendríamos una utilidad neta de 34.102.914 Gs. A continuación se presenta el estado de resultados anual.

ESTADO DE RESULTADOS ANUAL (Estado de Pérdida y Ganancia)

HidroShine SRL	
Estado de Perdidas Y Ganancias	
Ventas	884.340.000
Costo de Ventas	426.243.620
Utilidad Bruta	458.096.380
Gastos Operativos	418.209.931
Utilidad Antes de Impuestos	39.886.449
Impuesto a la renta empresarial	3.988.645
Utilidad Antes de la Reserva Legal	35.897.804
Reserva Legal	1.794.890
Utilidad Neta	34.102.914

Para el primer año proyectamos ventas por 884.340.000 Gs. El costo de ventas es de 426.243.620 Gs., lo que deja una utilidad bruta de 458.096.380 Gs. De esa cifra pagamos gastos operativos por 418.209.931 Gs., lo que da una utilidad antes de impuestos de 39.886.449 Gs. Después del impuesto a la renta de 3.988.645 Gs. y de la reserva legal de 1.794.890 Gs., la utilidad neta del primer año es de 34.102.914 Gs.

- Proyección de pérdidas y ganancias a 3 años – opcional
- Proyección de flujo de efectivo

Proyectamos el flujo de caja teniendo en cuenta la inversión inicial, los ingresos principales por ventas y los gastos operativos mensuales. El saldo se mantiene positivo todos los meses del primer año y cierra en 114.911.541 Gs. en diciembre.

El dinero en el banco es positivo todos los meses del primer año. Empezamos enero con un saldo positivo incluso después de pagar los muebles, las máquinas y los gastos de

apertura, y el saldo sube mes a mes hasta llegar a 114.911.541 Gs. en diciembre. Nunca entramos en números rojos, porque los 94.000.000 Gs. de capital cubren la inversión y los primeros meses de trabajo.

- Estado de flujo de efectivo 3 años – opcional
- Balance proyectado

A continuación se presenta el balance proyectado al cierre del primer año. El total del activo es igual al total del pasivo más el patrimonio neto, lo que significa que el balance está correcto.

ACTIVO	**MONTO (Gs.)**	**PASIVO Y PATRIMONIO NETO**	**MONTO (Gs.)**
Disponibilidades	114.911.541	Proveedores	12.342.824
Créditos	3.636.364	IRE a pagar	3.988.645
Materia prima	942.280	Capital	94.000.000
Activo fijo	25.656.000	Reservas	1.794.890
Cargos diferidos	3.151.000	Resultados	34.102.914
TOTAL ACTIVO	**148.297.185**	TOTAL PASIVO Y PN	**148.297.185**

El balance proyectado al cierre del primer año muestra el activo fijo que compramos al inicio, el stock de materia prima y de producto terminado, y el dinero que acumulamos durante el año. Del otro lado muestra los 94.000.000 Gs. que aportaron los socios y el resultado del ejercicio.

- Cálculo del punto de equilibrio – *Break-even analysis*

Para obtener ganancias tenemos que vender más de 4.280 botellas por mes, que son las unidades necesarias para cubrir nuestros costos fijos. A continuación se presenta el detalle de esos costos fijos.

COSTOS FIJOS	**MONTO (Gs.)**
Sueldos y jornales	10.500.000
Aporte patronal	1.732.500
Aguinaldo	875.000
Remuneración personal superior	7.382.204
Honorarios profesionales	1.090.909

Alquiler del local	4.000.000
Agua, luz y teléfono	800.000
Artículos de limpieza	200.000
Servicio de internet	150.000
Seguro de mercaderías	500.000
Publicidad y propaganda	1.500.000
TOTAL COSTO FIJO MENSUAL	**37.644.099**
Precio de venta por unidad	17.000
Costo variable por unidad	8.205
Margen por unidad	8.795
PUNTO DE EQUILIBRIO (unidades/mes)	**4.280**

Nuestro punto de equilibrio es de 4.280 unidades por mes. Surge de dividir el costo fijo de 37.644.099 Gs. entre el margen de 8.795 Gs. que deja cada botella, que es el precio de venta de 17.000 Gs. menos el costo variable de 8.205 Gs.

- Uso del capital

El proyecto se financia en un 100% con fondos propios. Nuestra inversión total es de 94.000.000 Gs. y se compone de la siguiente manera.

PRESUPUESTO DE INVERSIÓN	**PROPIA (Gs.)**	**TERCEROS**	**TOTAL (Gs.)**
Activo fijo	25.656.000	0	25.656.000
Costo de producción	21.258.876	0	21.258.876
Gastos de apertura	3.151.000	0	3.151.000
Gastos administrativos	10.131.819	0	10.131.819
Gastos comerciales	1.500.000	0	1.500.000
Recursos humanos	26.012.280	0	26.012.280
Caja chica	500.000	0	500.000
Imprevistos	5.790.025	0	5.790.025

INVERSION TOTAL	**94.000.000**	0	**94.000.000**

Los 94.000.000 Gs. de capital se destinan a comprar los muebles, las instalaciones, las maquinarias y los equipos informáticos, a pagar los honorarios de escribanía y los permisos, y a cubrir los sueldos, el alquiler y los servicios de los primeros meses antes de que empiece a entrar el dinero de las ventas.
